Table 5 - Baseline and follow up testing

 Table adapted from the BHIVA UK Guideline for the use of HIV Post-Exposure Prophylaxis 2021 [1]

	Baseline	2 weeks	6 weeks	12 weeks	6 months			
SEXUAL EXPOSURES ONLY								
STI testing (per local policy)	~	~		~				
				Syphilis only (and other STIs if further unprotected sexual intercourse)				
ALL EXPOSURES	1			1				
Creatinine and eGFR*	~	Only if abnormalities at baseline						
Alanine transaminase (ALT)*	~	Only if abnormalities at baseline or symptomatic						
Pregnancy test*	~	If appropriate		If appropriate				
HIV	HIV 1&2 Ag/Ab			HIV 1&2 Ag/Ab**	Not required unless further exposures			
Hepatitis B	HBsAb, HBsAg, HBcAb For immunocompetent adults who have completed Hep B vaccination and responded (HBsAb≥10 IU at any time) no baseline of follow up HepB testing required			If unvaccinated or HBsAb<10 IU at the time of exposure: HBsAb, HBsAg	Only advised if HBsAb remains <10 IU at 12 weeks: HBsAg			
Hepatitis C	HCV Ab		HCV Ab If high risk exposure e.g. HCV+ index, then HCV PCR or Hep C Ag is	HCV Ab If high risk exposure e.g. HCV+ index, then HCV PCR or Hep C Ag is	If high risk exposure e.g. HCV+ index case and testing at week 12 negative: HCV Ab

			preferable as the window period is shorter for antigen-based tests and can be requested as early as 2 weeks post exposure.	preferable as the window period is shorter for antigen-based tests and can be requested as early as 2 weeks post exposure.				
* Consider prior to initiation of PEP **HIV testing can be done a minimum 45 days after completion of the PEP course (see BHIVA HIV testing guidelines for further information). If the 28-day PEP course is completed this is 73 days (~10.5 weeks) post-exposure. For sexual exposure, to align with syphilis follow-up testing at week 12, the HIV test can be done at the same visit.
