

Carbapenemase producing *Enterobacterales* (CPE) in HSE acute hospitals

Monthly report on September 2019 data for the National Public Health Emergency Team (NPHE)

Executive summary of the latest available data (data source)

1. **Patients with newly-confirmed CPE (NCPERLS):** There were 69 patients in September, compared with 57 in August. There were 537 patients in total for 2018 versus 433 in 2017
2. **Notification of patients with invasive CPE infection (Departments of Public Health):** One invasive CPE infection was notified in September, with two in August, bringing the total to 13 invasive infections this year to date. There were 16 notifications in 2018 and 14 in 2017
3. **Creation of new CPE outbreak events (Departments of Public Health):** In September, three new acute hospital CPE outbreak events were created, with one in August, giving a total of 16 outbreak events this year to date. There were 27 new CPE outbreaks created in 2018 versus 15 in 2017
4. **Active/current CPE hospital outbreak events (HSE acute hospitals reporting to BIU):** Data returned by 98% of hospitals, with ten reporting events in September [August = 98% returns & seven outbreak events]
5. **CPE screens and CPE detections (HSE acute hospitals reporting to BIU):** Data returned by 98% of hospitals, with 26,359 CPE screens performed in September and 68 CPE detected overall, 62 from screening specimens [August = 100% returns; 26,180 screens; 53 CPE detected overall, 46 from screening specimens]
6. **Inpatients with known CPE (HSE acute hospitals reporting to BIU):** Data returned by 100% of hospitals. There were 220 inpatients of 32 hospitals with known CPE colonisation or infection in September [August = 96% returns; 217 inpatients of 26 hospitals]
7. **Known CPE inpatients not accommodated in an *en suite* single room/appropriate cohort area for part of their admission (HSE acute hospitals reporting to BIU):** Data returned by 100% of hospitals. In September, 10 inpatients of eight hospitals were not accommodated in an *en suite* single room/appropriate cohort area for part of their admission [August = 96% returns; seven inpatients of four hospitals]
8. **Total grams (g) of meropenem* issued by hospital pharmacies: (HSE acute hospitals reporting to BIU):** Data returned by 35% of hospitals. In September, 8,773g of meropenem were issued [August; 35% returns; 8,525g]

Data provided by the HSE Business Information Unit (BIU) are provisional. Once the HSE's monthly performance and data governance process is completed and the National Performance Profile has been approved by the HSE Directorate, these data will be considered final. In the event of there being any changes to the data contained in this report, they will be adjusted in subsequent reports (this report incorporates BIU data received by HPSC after review by the National HCAI Steering Group on 29/10/2019). Acute hospitals are required to report data for a given month to BIU by the 15th of the following month. The terms carbapenem-resistant and carbapenemase-producing *Enterobacterales* (CRE/CPE) have often been used interchangeably. For technical reasons the term *Enterobacterales* has now replaced *Enterobacteriaceae*.

*See section 7 for details

Prior to January 2019, 47 acute HSE hospitals reported CPE data to BIU, with Tallaght University Hospital data including Tallaght Paediatric Hospital and Cork University Hospital data including Cork University Maternity Hospital. Since January 2019, these are reported separately as: Children's Health Ireland at Tallaght and Cork University Maternity Hospital, increasing the total number of hospitals reporting monthly CPE data to BIU to 49.

1. Patients with CPE newly-confirmed by the National CPE Reference Laboratory Service (NCPERLS)

Microbiology laboratories are requested to submit all isolates from newly-detected patients from both diagnostic and screening specimens to NCPERLS. If a specific bacterial species and carbapenemase (e.g. OXA-48 *E. coli*) has previously been identified and confirmed from the patient, there is usually no need for the isolate to be resent to NCPERLS.

Additionally, all CPE isolates causing invasive infection (blood, CSF or other normally sterile site) should be referred to NCPERLS, even if a previous isolate of the same carbapenemase type from that patient was already referred to NCPERLS.

Isolates that are suspected carbapenemase producers and/or locally-confirmed CPE should also be referred to NCPERLS for further characterisation.

Data presented below are provisional. The data in this monthly report are based on latest preliminary rapid test results and/or in-house real time PCR assay by NCPERLS. WGS results may provide additional information. For example, the less common IMI or GES carbapenemases are not detected by rapid assays, but will be detected by WGS. Data relate to the date that NCPERLS received the isolates, not the original specimen collection date.

Appendix 1a displays annual CPE and carbapenemase trends from 2012 to 2018. **Appendix 1b** displays total patients with CPE newly-confirmed by NCPERLS, stratified by carbapenemase type, by HSE acute hospital for 2018 (also see **Appendix 1c**).

In September 2019, 69 patients with newly-detected CPE were identified, compared with 57 in August (Figure 1).

Figure 1. Monthly numbers of patients with CPE newly-confirmed by NCPERLS from September 2018. **Source:** NCPERLS

Of 69 patients in September 2019, 81% were newly-confirmed carriers detected on CPE screening (rectal swab/faeces) (Figure 2). OXA-48 remains the predominant carbapenemase in Ireland. There has been an increasing trend in the detection of NDM and KPC in the past four months. (Figure 3).

Figure 2. Monthly number of patients with CPE newly-confirmed by NCPERLS, by specimen type.
Source: NCPERLS

Figure 3. Monthly numbers of patients with CPE newly-confirmed by NCPERLS, by carbapenemase.
Source: NCPERLS

2. Invasive CPE infections notified to Departments of Public Health

In December 2018, the Infectious Diseases Regulations were updated, changing the terminology from CRE to CPE and expanding the requirement to notify not only invasive “carbapenemase producing *Enterobacteriaceae* (CPE) infection”, but also “non-invasive infection and colonisation” by laboratories (public and private) to Departments of Public Health.

To date, invasive CPE infection cases are reported through the Computerised Infectious Disease Reporting (CIDR) system. **Appendix 2a** displays annual total cases of notified invasive CPE infections from 2012 to 2018. National data are analysed by HPSC. *The data presented below are provisional and relate to the date that cases were reported on CIDR, not the specimen collection date or illness onset date.*

Figure 4 displays notifications of invasive CPE infection since Q4 2017 and **Figure 5** displays cumulative monthly notifications of invasive CPE from 2012 onwards. One case of invasive CPE infection was notified in September.

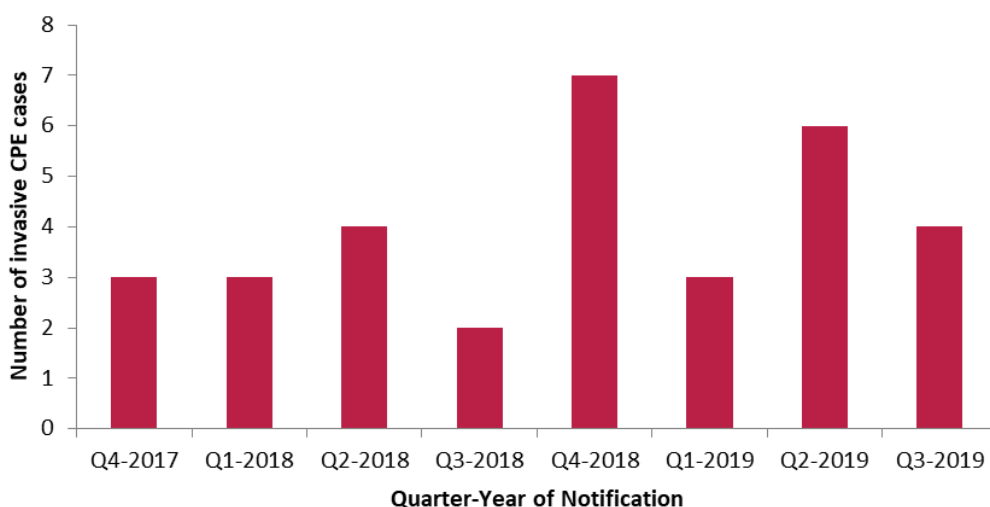

Figure 4. Quarterly notifications of invasive CPE infection from Q4 2017. **Source:** CIDR

Figure 5. Cumulative monthly notifications of invasive CPE infection (2012-2019). **Source:** CIDR

3. New CPE outbreak events created by Departments of Public Health

Under Infectious Diseases Regulations, outbreaks (infections and/or colonisations) must be notified to the Department of Public Health, with creation of a unique outbreak event on CIDR. Legislation applies to all healthcare facility types regardless of ownership or acuity. *The data presented below are provisional and relate to the date an outbreak event was created on CIDR, not the date the outbreak was first detected or notified by the healthcare facility.*

Appendix 2b displays annual total of CPE outbreaks created on CIDR from 2012 to 2018. **Figure 6** displays quarterly CPE outbreaks created on CIDR from Q4 2017. In September 2019, three new acute hospital CPE outbreak events were created on CIDR, the latest on the 23rd September.

Figure 6. Quarterly new CPE outbreak events created by Departments of Public Health from Q4 2017. **Source:** CIDR

4. Active/current CPE hospital outbreak events reported to BIU

All 49 acute HSE hospitals are asked to report data on the number of active or current CPE outbreaks to the HSE’s Business Information Unit (BIU), with monthly data available from January 2018. **Appendix 3** describes the CPE-related performance indicators currently reported to BIU by HSE acute hospitals and **Appendix 4** displays compliance with monthly data returns of each hospital for the preceding two months.

Figure 7 displays the total number of hospitals reporting active/current CPE outbreaks from September 2018. In September 2019, a current/active CPE outbreak was being managed by 10 (21%) of the 48 hospitals (98%) that reported this data.

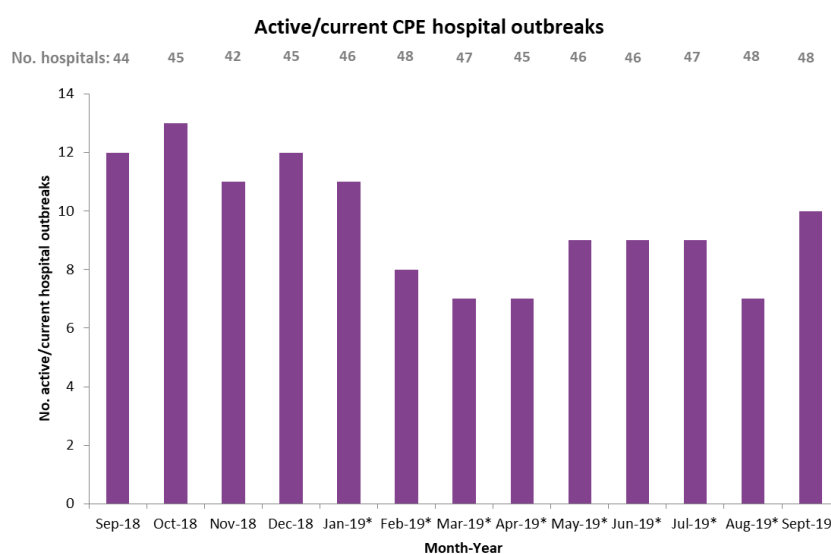

Figure 7. Monthly CPE active/current outbreaks (purple bars) from September 2018. Number of hospitals reporting cited above each bar. **Source:** BIU

5. Monthly CPE screens performed and CPE positives reported to BIU

All 49 acute HSE hospitals are asked to report monthly data on the total number of CPE screens performed (rectal swab or faeces) and on the number of patients with newly-detected CPE from either screening or diagnostic specimens to the HSE's BIU. The monthly data reported by NCPERLS will not match the monthly data reported to BIU for the following reasons:

1. NCPERLS accepts specimens from both acute HSE and private hospital microbiology laboratories – Acute HSE hospitals are required to report data to BIU, whereas private hospitals are not required to report
2. NCPERLS reports positive specimens based on the date the specimen was received by NCPERLS, not the date the specimen was taken. Hospitals return data to BIU based on specimen collection date

Appendix 3 describes the CPE-related performance indicators currently reported to BIU by HSE acute hospitals and **Appendix 4** displays compliance with monthly data returns of each hospital for the preceding two months. **Table 1** and **Figure 8** display national monthly data totals from September 2018, with a monthly increase in the number of CPE screens performed observed.

Data provided by BIU are provisional. Once the HSE's monthly performance and data governance process is completed and the National Performance Profile has been approved by the HSE Directorate, these data will be considered final. In the event of there being any changes to the data contained in this report, they will be adjusted in subsequent reports (this report incorporates BIU data received by HPSC after review by the National HCAI Steering Group on 29/10/2019). Acute hospitals are required to report data for a given month to BIU by the 15th of the following month.

	N (%) HSE acute hospitals providing data (CPE004)	Total monthly CPE screens (CPE004)	Total monthly confirmed CPE cases screening & diagnostic (CPE002+003)	Total confirmed CPE cases from screening (CPE002)	Percentage of positive CPE screens (CPE002/CPE004)
September 2018	47 (100)	16,341	49	45	0.28
October 2018	47 (100)	19,703	81	74	0.38
November 2018	45 (96)	19,824	72	68	0.34
December 2018	47 (100)	19,609	31	28	0.14
January 2019*	49 (100)	21,866	58	50	0.23
February 2019*	49 (100)	19,299	38	36	0.19
March 2019*	48 (98)	22,526	51	48	0.21
April 2019*	49 (100)	24,463	61	56	0.23
May 2019*	49 (100)	24,195	35	29	0.12
June 2019*	49 (100)	23,757	64	56	0.24
July 2019*	49 (100)	27,315	52	48	0.18
August 2019*	49 (100)	26,180	53	46	0.18
September 2019*	48 (98)	26,359	68	62	0.24

*Tallaght University Hospital included Tallaght Paediatrics data and Cork University Hospital included Cork University Maternity Hospital data prior to January 2019. These are reported separately as CHI at Tallaght and Cork University Maternity Hospital respectively from January 2019, bringing the total number of hospitals reporting from January 2019 to 49.

The monthly total number of patients who had a CPE screen performed is likely to be less than the total screens, as some patients may have been tested more than once (e.g., admission and weekly CPE screening on selected high-risk wards, patients identified as contacts of CPE carriers requiring weekly screening for four weeks while they remain an inpatient etc.). The monthly number of CPE screens performed and CPE positive results from both screening and diagnostic specimens, by hospital group and hospital is displayed in **Appendix 5**.

In September, there were 68 patients from whom CPE were newly-detected (**Table 1** and **Figure 8**). Of these, a screening specimen accounted for 62 new detections (0.24% of all screening specimens n=26,359; **Table 1** and **Figure 9**). **Figures 10** and **11** display the rate of CPE screens and number of newly-detected patients with CPE in September by hospital group, respectively. Considerable

variation in screening activity between each group was observed, as is evident from the differences in the screening rate by hospital group in **Figure 10**, which suggests variable local implementation of national CPE screening guidance.

Figure 8. Monthly total CPE rectal swab/faecal screening specimens (red bars), CPE diagnostic and screening detections from all sites (pink line) and CPE detections from rectal swab/faecal screening specimens (purple line) in acute HSE hospitals from September 2018. Number of hospitals reporting cited above each bar. **Source:** BIU

*Tallaght University Hospital included Tallaght Paediatrics data and Cork University Hospital included Cork University Maternity Hospital data prior to January 2019. These are reported separately as CHI at Tallaght and Cork University Maternity Hospital respectively from January 2019, bringing the total number of hospitals reporting from January 2019 to 49.

September 2019*	49 (100)	220	49 (100)	10

*Tallaght University Hospital included Tallaght Paediatrics data and Cork University Hospital included Cork University Maternity Hospital data prior to January 2019. These are reported separately as CHI at Tallaght and Cork University Maternity Hospital respectively from January 2019, bringing the total number of hospitals reporting from January 2019 to 49.

6.1 Inpatients with known CPE infection or colonisation (Indicator: CPE005)

In September 2019, all 49 HSE acute hospitals (100%) provided data. There were 220 inpatients with known CPE infection or colonisation accommodated in 32 (65%) reporting HSE acute hospitals (range = 1 – 30 inpatients), with 17 hospitals reporting no known inpatients with CPE (**Figure 12** and **Appendix 5**).

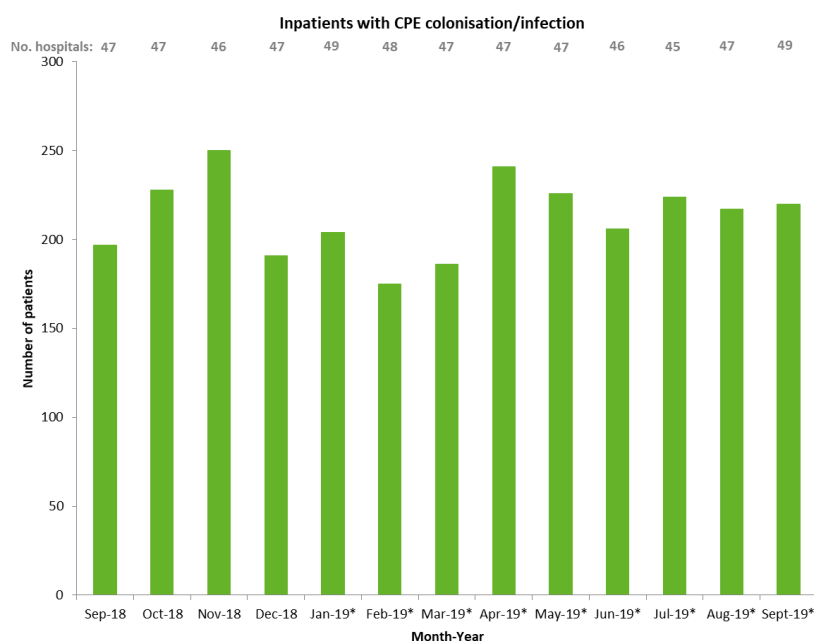

Figure 12. Monthly total of known inpatients with CPE (green bars) in acute HSE hospitals. Number of hospitals reporting cited above each bar. **Source:** BIU

*Tallaght University Hospital included Tallaght Paediatrics data and Cork University Hospital included Cork University Maternity Hospital data prior to January 2019. These are reported separately as CHI at Tallaght and Cork University Maternity Hospital respectively from January 2019, bringing the total number of hospitals reporting from January 2019 to 49.

6.2 Known CPE inpatients not accommodated in an *en suite* single room or appropriate cohort* for part of their admission (Indicator: CPE006)

In September 2019, all 49 HSE acute hospitals (100%) provided data. A total of 10 inpatients of eight acute HSE hospitals (16% of those providing data) were not accommodated in an *en suite* single room or appropriate cohort* for part of their admission, increasing the risk of further CPE transmission (Figure 13 and Appendix 5): Ireland East Hospital Group (n=5 patients), Saolta University Health Care Group (n=3 patients), South/South West Hospital Group (n=1 patient) and University of Limerick Hospital Group (n=1 patient). Visits by the national team to a number of hospitals show that in many cases patients who are not accommodated in an *en suite* single room or appropriate cohort* for part of their admission are very often accommodated in a single room with dedicated commode. Some hospitals have very few *en suite* single rooms and accommodation in a single room with dedicated commode, though not ideal, may be the best risk mitigation available.

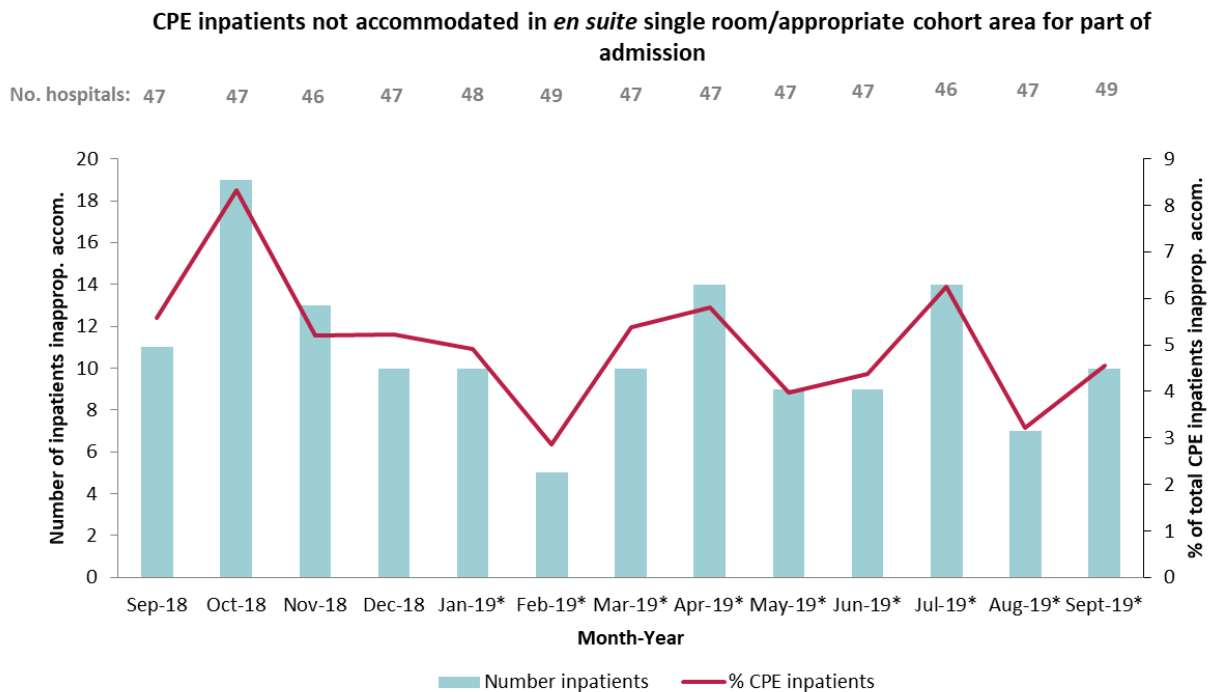

Figure 13. Monthly total known CPE inpatients (blue bars) not accommodated in an *en suite* single room or appropriate cohort area for part of their admission to acute HSE hospitals. Proportion (%) of total CPE inpatients not accommodated appropriately (red line). Number of hospitals reporting cited above each bar. **Source:** BIU

*Tallaght University Hospital included Tallaght Paediatrics data and Cork University Hospital included Cork University Maternity Hospital data prior to January 2019. These are reported separately as CHI at Tallaght and Cork University Maternity Hospital respectively from January 2019, bringing the total number of hospitals reporting from January 2019 to 49.

7. Meropenem use

7.1 Acute HSE hospital pharmacy dispensing of meropenem, as reported to BIU (indicator: CPE008)

Meropenem is a carbapenem antimicrobial of last resort, used in hospitals and reserved for treatment of infections due to antimicrobial resistant bacteria and infections in seriously ill patients, with input from an infection specialist (clinical microbiologist or infectious diseases physician). Because antimicrobial consumption is a driver of antimicrobial resistance, excessive consumption of meropenem is undesirable, as it may contribute to the spread of CPE in hospitals.

All 49 acute HSE hospitals are asked to report data on net monthly grams of meropenem dispensed by the pharmacy. **Appendix 3** describes the CPE-related performance indicators currently reported to BIU by HSE acute hospitals and **Appendix 4** displays compliance with monthly data returns of each hospital for the preceding two months.

Table 3 and **Figure 14** display national monthly data from September 2018 and **Appendix 5** displays data by hospital and hospital group. A decline in reporting hospitals was observed in 2018, bringing the total to just 17 HSE acute hospitals (35%) in September 2019. Fewer reporting hospitals accounts for the reduction in monthly meropenem dispensing, with 8,773 net grams dispensed in September by 16 pharmacies (94% of those providing data), and one hospital reported having dispensed no meropenem.

Table 3. Monthly net grams of meropenem dispensed from September 2018. **Source:** BIU

	N (%) HSE acute hospitals providing data (CPE008)	Net grams of meropenem dispensed monthly	Number of pharmacies dispensing meropenem
September 2018	14 (30)	7,671	12
October 2018	15 (32)	8,635	12
November 2018	15 (32)	7,513	13
December 2018	15 (32)	7,512	13
January 2019*	15 (31)	8,376	14
February 2019*	15 (31)	7,967	14
March 2019*	14 (29)	8,044	13
April 2019*	15 (31)	8,928	14
May 2019*	16 (33)	10,129	15
June 2019*	14 (29)	4,806	13
July 2019*	17 (35)	8,852	14
August 2019*	17 (35)	8,525	15
September 2019*	17 (35)	8,773	16

*Tallaght University Hospital included Tallaght Paediatrics data and Cork University Hospital included Cork University Maternity Hospital data prior to January 2019. These are reported separately as CHI at Tallaght and Cork University Maternity Hospital respectively from January 2019, bringing the total number of hospitals reporting from January 2019 to 49.

Figure 14. Monthly net** grams of meropenem dispensed by acute HSE hospital pharmacies (purple bars) and rate of meropenem dispensed per 100 bed days used (pink line). Note monthly reduction in number of hospitals reporting data, cited above each bar. **Source:** BIU

*Tallaght University Hospital included Tallaght Paediatrics data and Cork University Hospital included Cork University Maternity Hospital data prior to January 2019. These are reported separately as CHI at Tallaght and Cork University Maternity Hospital respectively from January 2019, bringing the total number of hospitals reporting from January 2019 to 49.

**Not all meropenem dispensed by the hospital pharmacy may be administered to patients within the month. Pharmacy dispenses Xg in a month, but Yg is returned at the end of the month: Net = X-Y. For example, 400g issued in January, with 100g returned in February: 100g is deductible from the total issued in February (net = 300g). Denominator used in rate calculations derived from average monthly bed days used for 2014-2018 inclusive (2013-2017 used for Jan-Dec 2018 figures).

7.2 National carbapenem use data, as reported to HPSC

The majority of HSE acute hospitals submit data on antimicrobial use to the HPSC. Data are published nationally and by participating hospital on the HPSC website. Overall use and use by antimicrobial class, including carbapenems (meropenem, ertapenem and imipenem), are reported. Data are expressed as a rate of defined daily doses (DDD) per 100 bed days used (BDU), using the WHO standard method. **Figure 15** displays annual national carbapenem use trends to end Q4 2018, with a consistent decline in carbapenem use observed since a peak in 2014.

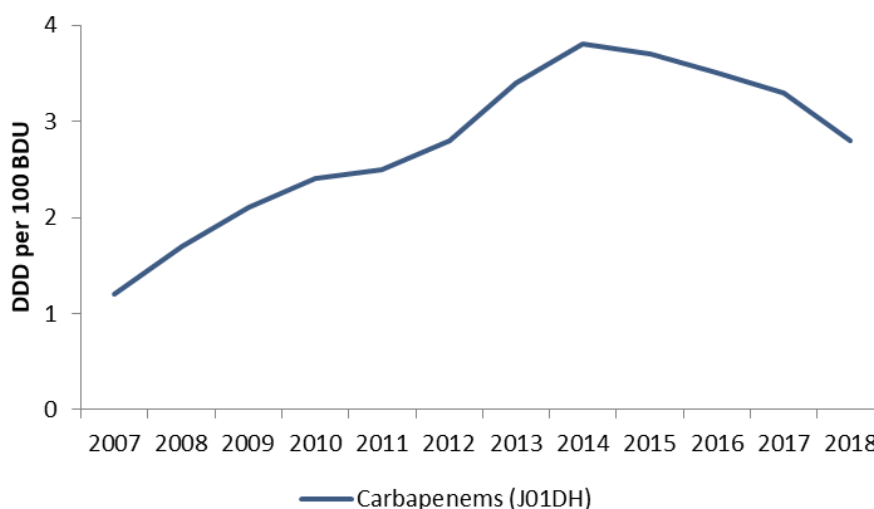

Figure 15. Annual national carbapenem use in acute HSE hospitals. **Source:** HPSC

<http://www.hpsc.ie/a-z/microbiologyantimicrobialresistance/europeansurveillanceofantimicrobialconsumptionesac/PublicMicroB/SACHC/Report1.html>

8. Enhanced surveillance of CPE, as reported to HPSC

In January 2017, a mandatory CPE enhanced surveillance scheme was launched, with quarterly data reported by microbiology laboratories to HPSC, including those serving public and private hospitals. CPE enhanced surveillance collects information based on the first CPE isolate per patient per year of any *Enterobacteriales* species confirmed as a carbapenemase producer from acute HSE and private hospitals, patient age, gender, location at the time of positive CPE specimen, specimen type, and carbapenemase type. For inpatients, additional information is sought on patient isolation status within 24 hours of a suspected CPE result, whether or not the patient had required antimicrobial therapy for suspected CPE infection by the time of reporting and patient outcome. In 2018, 564 CPE were reported from 563 patients by 30 laboratories. This represents an increase from 449 cases from 447 patients in 2017. The latest CPE enhanced surveillance report is available on the HPSC website:

https://www.hpsc.ie/a-z/microbiologyantimicrobialresistance/strategyforthecontrolofantimicrobialresistanceinirelandsari/carbapenemresistantenterobacteriaceae/surveillanceofcpeinireland/cpequarterlysurveillancereports/CPE%20Enhanced%20Surveillance%20Report%20Q1%202019_FINAL_20190925.pdf

9. Acknowledgements

We would like to sincerely thank all who have contributed to this report: Microbiology Surveillance Scientists, Infection Prevention and Control Nurses, Microbiology Laboratory Scientists, Clinical Microbiologists, National CPE Reference Laboratory Service, BIU of HSE along with all the staff of the Departments of Public Health across Ireland.

Source: NCPERLS

[^]From 2012-2017 the number of newly-detected patients with CPE was determined by “the first isolate per patient per year of any *Enterobacterales* species that was a confirmed carbapenemase-producer from any specimen type, either infection or carriage”. In 2018 and onwards the number of newly-detected patients with CPE was determined by “the first isolate per patient received to the NCPERLS” (i.e. patients counted in 2017 are not recounted again in 2018).

- Data are based on bacterial cultures submitted to NCPERLS. Patients are counted once only in the hospital/hospital group from which their first CPE isolate was submitted. It should not be assumed that the location of the patient at the time of first detection represents the hospital/hospital group in which colonisation/infection was acquired.
- Total does not include a small number of NDM-producing *Acinetobacter* species and VIM-producing *Pseudomonas aeruginosa* isolates detected in 2018, because neither are members of the order *Enterobacterales*. Other healthcare facilities include specimens from: Private hospitals, long-term care facilities and GP surgeries.

Appendix 3. CPE-related performance indicators reported monthly by acute HSE hospitals to the BIU.

Carbapenemase Producing Enterobacteriaceae (CPE) and Meropenem use

Reference	Indicator
CPE002	Number of patients confirmed with newly detected CPE from rectal swabs/ faeces *
CPE003	Number of patients confirmed with newly detected CPE from any other site *
CPE004	Total number of rectal swabs/ faeces samples tested for CPE
CPE005	Number of patients with known CPE infection or colonisation who were inpatients at any time during the month
CPE006	Number of in-patients with known CPE who were accommodated overnight in any accommodation other than an en-suite single room or appropriate cohort area, for any part of their admission. (Include time spent in the emergency department. Overnight means present at midnight).
CPE007	Did you or the IPC team consider that there was evidence of person to person transmission of CPE in your hospital in the past month
CPE008	Net number of grams of meropenem issued from pharmacy in this month **
CPE009	Hospital Manager approved all information included in CPE002- CPE 008 inclusive confirm Yes/ No ***
CPE010	Do you have an active/current CPE outbreak in your hospital during this month? ****

Note:

It is acknowledged that this information does not of itself form a basis for meaningful comparisons between hospitals and this is not its intended purpose. The data is intended to provide real time system wide information on the detection and distribution of patients colonised or infected with CPE and the challenges in containing further spread.

*To avoid duplication confirmed CPE should be counted once only and for the purpose of this return it should be associated with the month during which a molecular result performed either in house or at reference laboratory becomes available to the Infection Prevention Control team at the hospital making the return.

**It is acknowledged that the dispensing of meropenem by the hospital pharmacy does not mean that the agent was used in patients in that month. The quantity returned should be the net quantity issued. For example if in a given month a pharmacy issues 400g but receives 100g returned from the wards the number for this return is 300g. For example, 400 grams was issued in January, but 100 grams was returned in February, this is deducted from the total issued in February.

***It is important that the name of the Hospital Manager approving the return is included in each return

****For definition and help with determining if your hospital has an outbreak, please refer to the policy document HCAI/AMR P003 "Guide to Assessing if there is Evidence of Carbapenemase Producing Enterobacteriaceae (CPE) Transmission in an Acute Hospital"

Appendix 5. Monthly BIU CPE performance indicator data by Hospital Group

5a. National (CPE indicators 002, 003, 004, 005, 006 and 008):

Performance Indicators:	
CPE002	Number of patients confirmed with newly detected CPE from rectal swabs/ faeces
CPE003	Number of patients confirmed with newly detected CPE from any other site
CPE004	Total number of rectal swabs/ faeces samples tested for CPE
CPE005	Number of patients with known CPE infection or colonisation who were inpatients at any time during the month
CPE006	Number of in-patients with known CPE who were accommodated overnight in accommodation other than an en-suite single room or appropriate cohort area for any part of their admission. <i>Please note that CPE inpatients accommodated in appropriate cohort areas were not captured in the definition for CPE006 in use from October to December 2017</i>
CPE008	Net number of grams of meropenem issued from pharmacy in this month
No data submitted by provider

5d. Ireland East Hospital Group (continued):

Performance Indicators:	
CPE002	Number of patients confirmed with newly detected CPE from rectal swabs/ faeces
CPE003	Number of patients confirmed with newly detected CPE from any other site
CPE004	Total number of rectal swabs/ faeces samples tested for CPE
CPE005	Number of patients with known CPE infection or colonisation who were inpatients at any time during the month
CPE006	Number of in-patients with known CPE who were accommodated overnight in accommodation other than an en-suite single room or appropriate cohort area for any part of their admission. <i>Please note that CPE inpatients accommodated in appropriate cohort areas were not captured in the definition for CPE006 in use from October to December 2017</i>
CPE008	Net number of grams of meropenem issued from pharmacy in this month
No data submitted by provider

5g. South / South West Hospital Group (continued):

Performance Indicators:	
CPE002	Number of patients confirmed with newly detected CPE from rectal swabs/ faeces
CPE003	Number of patients confirmed with newly detected CPE from any other site
CPE004	Total number of rectal swabs/ faeces samples tested for CPE
CPE005	Number of patients with known CPE infection or colonisation who were inpatients at any time during the month
CPE006	Number of in-patients with known CPE who were accommodated overnight in accommodation other than an en-suite single room or appropriate cohort area for any part of their admission. <i>Please note that CPE inpatients accommodated in appropriate cohort areas were not captured in the definition for CPE006 in use from October to December 2017</i>
CPE008	Net number of grams of meropenem issued from pharmacy in this month
No data submitted by provider

Appendix 6. Data sources for CPE indicators in Ireland – Provisional data is typically deemed final by the end of the following quarter.

Indicator	Data source	Frequency collated	Unit being measured based on
Invasive CPE infections	CIDR (HPSC)	Weekly	New notifications of invasive CRE/CPE infection by clinicians and laboratories (public and private) to Departments of Public Health. BASED ON DATE REPORTED ON CIDR
CPE outbreaks	CIDR (HPSC)	Weekly	New notifications of CPE outbreaks in healthcare settings to Departments of Public Health and created as a new event on CIDR BASED ON DATE OUTBREAK CREATED ON CIDR
Patients with CPE, newly-confirmed by NCPERLS	NCPERLS	Monthly	Number of patients newly-confirmed by NCPERLS with CPE from any specimen type. Patient counted once per year, except where a second carbapenemase type is identified when the patient is counted again. BASED ON DATE SPECIMEN RECEIVED AT NCPERLS
CPE positive screens (Indicator: CPE002)	BIU	Monthly	Number of patients with newly detected CPE from screens (rectal swabs/faeces) reported by acute HSE hospitals BASED ON DATE NEW CPE CONFIRMED
Newly detected patients with CPE (Indicator: CPE003)	BIU	Monthly	Number of patients with newly detected CPE from clinical specimens reported by acute HSE hospitals BASED ON DATE NEW CPE CONFIRMED
CPE screens (Indicator: CPE004)	BIU	Monthly	Number of CPE screens performed by acute HSE hospital BASED ON REPORTING MONTH
Inpatients with CPE (Indicator: CPE005)	BIU	Monthly	Number of inpatients with known CPE infection admitted to acute HSE hospitals at any time during the month BASED ON REPORTING MONTH
Unsuitable accommodation (Indicator: CPE006)	BIU	Monthly	Number of in-patients with known CPE who were accommodated overnight in unsuitable accommodation for any part of their admission in acute HSE hospitals. (Any facility other than an <i>en suite</i> single room or designated cohort area is unsuitable. Include time spent in the emergency department. Overnight means present at midnight). BASED ON REPORTING MONTH
Evidence of CPE transmission (Indicator: CPE007)	BIU	Monthly	Number of acute HSE hospitals reporting evidence of person-to-person transmission BASED ON REPORTING MONTH
Meropenem dispensed (Indicator: CPE008)	BIU	Monthly	Net number of grams of meropenem dispensed by acute HSE hospital pharmacies BASED ON REPORTING MONTH
Carbapenem use	HPSC	Quarterly	Carbapenem use data from public acute hospitals measured in defined daily doses (DDD) per 100 bed days used (BDU) BASED ON REPORTING QUARTER
CPE Enhanced surveillance	HPSC	Quarterly	Laboratories (public and private) report detailed information on the first positive CPE isolate per patient per year (invasive and non-invasive infections, colonisations and positive screens) BASED ON SPECIMEN DATE

Appendix 7 Glossary of Terms

AMR	Antimicrobial resistance
BIU	Business Information Unit
CIDR	Computerised Infectious Disease Reporting system
CPE	Carbapenemase-producing <i>Enterobacteriaceae/Enterobacterales</i>
CRE	Carbapenem-resistant <i>Enterobacteriaceae/Enterobacterales</i>
HCAI	Healthcare-associated infection
HPSC	Health Protection Surveillance Centre
HSE	Health Service Executive
NCPERLS	National Carbapenemase-Producing <i>Enterobacterales</i> Reference Laboratory Service
NPHE	National Public Health Emergency Team
