

Information sheet for hospital inpatients during a COVID-19 outbreak

Version 1.2 31.01.2021

Dear patient

At the moment there is an outbreak of COVID-19 in this hospital. An outbreak means that the virus that causes COVID-19 has spread between a number of people within the hospital. The details of the wards where we have a problem at the moment and how many people are affected changes from day to day. Hospital staff will answer any questions you have about the situation today.

When the virus spreads in a hospital it can infect both patients and hospital staff. We understand that it is worrying and disappointing to know there is an outbreak in the hospital. We want you to know that we are doing everything practical to stop the spread of the virus as quickly as possible to protect patients and staff but it is difficult.

Since the start of the pandemic this hospital has put many extra measures in place to improve the control of this virus and other infections in the hospital. One of those measures is trying to find people who have COVID infection as early as we can. To help us do this you will be asked questions to check if you have developed symptoms of COVID-19 and you may be tested for COVID-19 more than once. The reason you may be tested more than once is because we know that even with the best technology in the world a single test result cannot prove you don't have COVID-19. We know that having the test can be a bit uncomfortable for some people so thank you for your patience and support.

Even with all these measures in place it is very hard to keep this virus fully under control all the time. Hospitals are very much part of the community. When the COVID virus is very common in the community it is very hard to keep it out of the hospital even with the best efforts of everyone. We are asking you to help us control the spread of the virus.

You can help us keep everyone safe when you are in hospital

It is good to move around a bit but please do not go into the room or bed-space of other patients or stop to chat with other patients.

Don't share personal items such as newspapers, food items, headphones etc with other patients.

Clean your hands regularly with the hand gel on the ward.

Wear a mask when you are outside of your room or away from your bed-space. If you feel more comfortable wearing a mask all the time please let staff know and they will give you a mask to wear.

There will be no visiting except on critical or compassionate grounds.

If at any time you get a temperature or a cough, if you feel you are getting more short of breath please tell a nurse or a doctor.

It's OK to remind staff to clean their hands or to tell a staff member if you see anything that is not clean.

Important information for going home

If you have had a positive COVID-19 in the past 14 days and have been discharged home from hospital you must self-isolate* for 14 days from the day your symptoms started. Because you have been hospitalised this is a little longer than most people. The last 5 days of self-isolation must be without a fever.

If you have been told you have had contact with COVID-19 while in hospital you will need to restrict* your movements for 14 days after you go home.

* Self-isolation means you should isolate yourself from other people in your home. You should not go outside unless you have your own outdoor space away from other people. Restricting your movements means you should stay at home; you can go outside to exercise as long as you keep 2m from other people. A full breakdown is on [hse.ie](https://www.hse.ie)

If you experience shortness of breath, cough, temperature, (or any other [COVID-19 symptoms](#)) or become unwell phone your GP for further advice. A free COVID-19 test can be arranged for you if you develop symptoms.

The following is a list of things to remind you what you should try not do at this time:

Do not go to work, school or college.

Do not use public transport.

Only allow people you need to help you in your home at this time (no purely social visits)

Do not visit others.

Do not go to the shops or pharmacy unless it's absolutely necessary - where possible, order your groceries online or have some family or friends drop them off.

Do not drop off or collect your children from school unless it's absolutely necessary. Ask family or friends to do this for you. If you have to go, avoid other people. If you travel by car and the children can safely come to the care on their own is best to say in your car.

Do not go to gatherings such as weddings or funerals.

Do not meet face-to-face with older people, anyone with a long-term medical condition.

Further information

You can get further information on COVID-19 at www.hse.ie/coronavirus and information on hand hygiene at www.hse.ie/handhygiene

Please talk to any of our staff at any time if you have any questions or concerns during your time at your hospital.
