

Weekly report on the epidemiology of COVID-19 in Ireland

Week 17, 2023

- The epidemiological weeks in this report, run from Sunday to Saturday. Please refer to the HPSC website for a complete list of epidemiological weeks with start and end dates for 2020-2023.
- Data for this report are based on cases notified on the Computerised Infectious Disease Reporting (CIDR) up to midnight 29/04/2023. Data were extracted from CIDR system on 02/05/2023. Data are provisional and subject to ongoing review, validation and update. As a result, figures in this report may differ from previously published figures.
- Data should be interpreted in the context of the current testing policy. Testing policies can affect the number and age distribution of confirmed cases notified on CIDR. Information on the current testing policy in Ireland can be found here

Key points

Notified confirmed cases

- In week 17 (between April 23 and April 29 2023) there were 482 new confirmed COVID-19 cases reported on CIDR. This is a decrease of 21.5% compared to week 16 when there were 614 confirmed COVID-19 cases notified.
- The highest number of new confirmed COVID-19 cases in week 17 was in the age group of 75-84 years with 24.9% of notified cases in week 17.

Laboratory data of SARS-CoV-2 PCR tests

• In week 17, a total of 5,326 SARS-CoV-2 tests were performed, of which 532 (10%) were positive. This is stable compared to the previous week, 16, when 9.8% were positive.

Deaths

• Since the start of the pandemic 8,866 COVID-19 deaths among notified COVID-19 cases have been reported on CIDR. Of these, 4 had a date of death in week 17.

Table 1: Summarv	characteristics of COVID-19 cases notified in Ireland during week 17, 2023 and 2023 to date	ç
Table 1. Ourmany	maradiensities of 00 MD 15 dases notified in freiding week 17, 2020 and 2020 to date	-

	Week	17, 2023	Tota	ıl 2023
	Number	Percentage	Number	Percentage
Total number of confirmed cases	482		17,001	
Incidence rate of confirmed cases per 100,000 population	10.1		357	
Severe cases				
Number of cases hospitalised	267*	55.39	5,910*	34.76
Number of cases admitted to ICU	2*	0.41	69*	0.41
Number of deaths among confirmed cases	2*	0.41	267*	1.57

* The number of cases hospitalised, cases admitted to ICU and deaths described in the above table relate only to COVID-19 cases who were notified during this reporting period, and where the outcome is known at the time of reporting. It does not reflect all hospitalisations, ICU admissions and deaths related to COVID-19 which occurred during the period covered by the report. It also does not reflect the final number of cases hospitalised, admitted to ICU or deaths for these cases notified during this period as the outcome may not yet have occurred, or is yet to be notified

Confirmed cases of COVID-19

Since the start of 2023, 17,001 confirmed COVID-19 cases have been notified on CIDR. In the past week, week 17 2023, 482 confirmed COVID-19 cases were reported on CIDR. This is a decrease of 21.5% compared to week 16 when 614 confirmed COVID-19 cases were notified. Figure 1 shows the epidemiological curve of COVID-19 cases notified in Ireland from week 1 2022 to week 17 2023. Data since the start of the pandemic is available on the Epidemiology of COVID-19 in Ireland infohub.

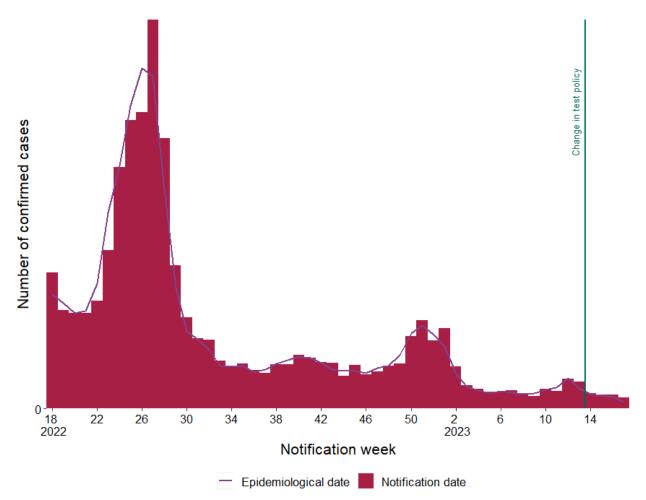

Figure 1a: Number of confirmed COVID-19 cases by notification week and epidemiological date in Ireland between week 18, 2022 and week 17, 2023. The red bars represent the number of confirmed cases by notification date. The purple line represents the number of cases by epidemiological date. The dark blue horizontal lines indicate a change in test policy^{1 2}

¹ Since 28/02/2022 (week 9, 2022), PCR testing was only needed for symptomatic people in the community within certain risk groups: those who have not had booster vaccination and are aged 55 years and older; those with a high-risk medical conditions; those who are immunocompromised; those who live in the same household as a person who is immunocompromised; those who provide care or support for person they know to be immunocompromised; those who are pregnant; Healthcare Workers.

² Since 30/03/2023 (week 13, 2023), community test centres closed and PCR testing was only performed based on clinical assessment.

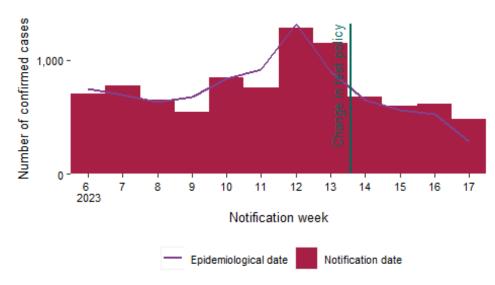

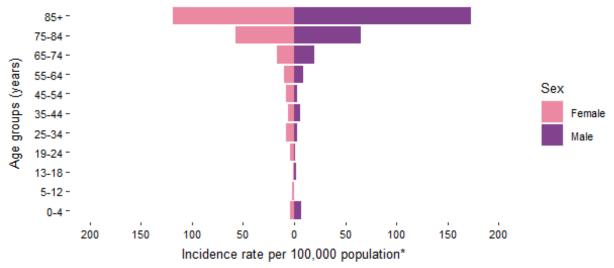

Figure 1b: Number of confirmed COVID-19 cases by notification week and epidemiological date in Ireland in the last 12 weeks. The red bars represent the number of confirmed cases by notification date. The purple line represents the number of cases by epidemiological date.

Confirmed COVID-19 cases by age and sex

65-74	68	45	66.2	1,974	1,141	57.8
75-84	120	79	65.8	2,559	1,659	64.8
85+	93	60	64.5	1,925	1,115	57.9
Unknown	0	0	0.0	3	0	0.0

³ Hospitalisations may be underestimated for recent weeks as the outcome may not yet have occurred or may not yet have been reported to CIDR

⁴ Data are based on the date the case was notified on CIDR, and not the date of hospital admission

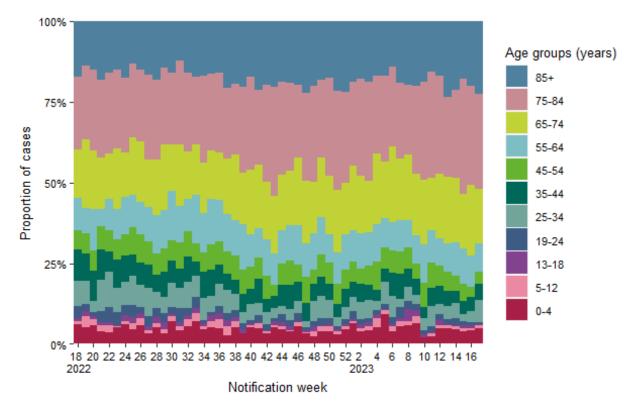

Figure 6: Age distribution of hospitalised confirmed COVID-19 cases notified on CIDR in Ireland between week 18, 2022 and week 17, 2023

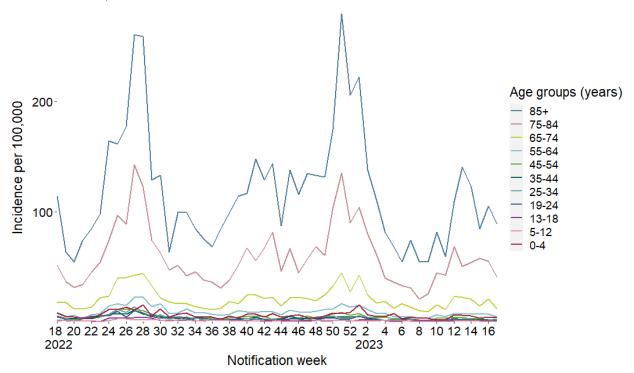

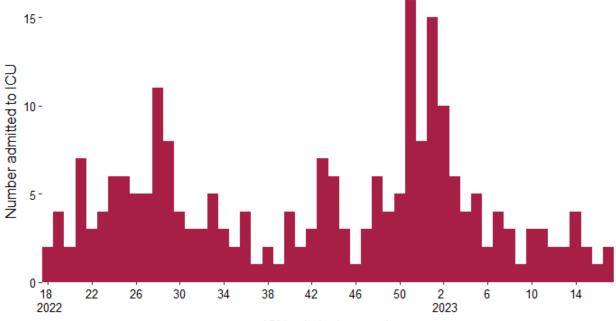

Figure 7: Incidence rate by age group of hospitalisations among confirmed COVID-19 cases on CIDR in Ireland between week 18, 2022 and week 17, 2023

ICU admissions

A total of 2 COVID-19 cases were admitted to ICU in the latest epidemiological week⁶, week 17 2023.

ICU admission week

Figure 8: Number of ICU COVID-19 ICU admissions in Ireland by week of ICU admission, between week 18, 2022 2022 and week 17, 2023⁵

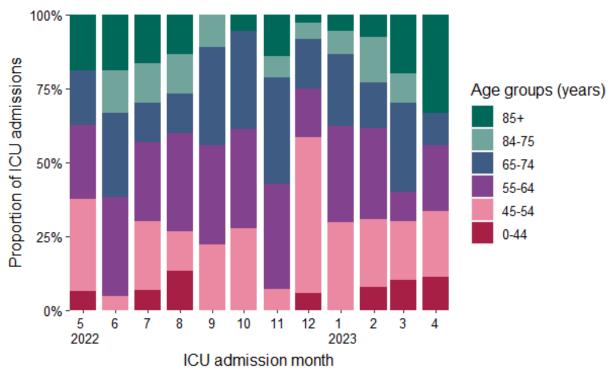

Figure 9: Age distribution of confirmed COVID-19 cases admitted to ICU by month of admission May, 2022 and April, 2023

⁵ Please note that most recent weeks may not yet reflect all admissions

Deaths

100 -

Please note the below figures and tables include all cases (confirmed, probable and possible) who have died.

A total of 4 cases had a date of death in the latest epidemiological week, 17. The mean and median age of those who died in the previous epidemiological week was 86 and 85.5 years respectively.

⁶ Please note that most recent weeks may not yet reflect all deaths

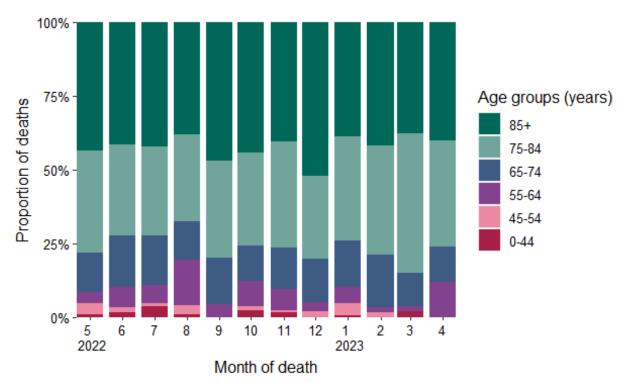

Figure 11: Age distribution of COVID-19 deaths notified on CIDR in Ireland between May, 2022 and April, 2023

Laboratory data of SARS-CoV-2 PCR tests

In week 17, a total of 5,326 SARS-CoV-2 tests were performed, of which 532 (10%) were positive.

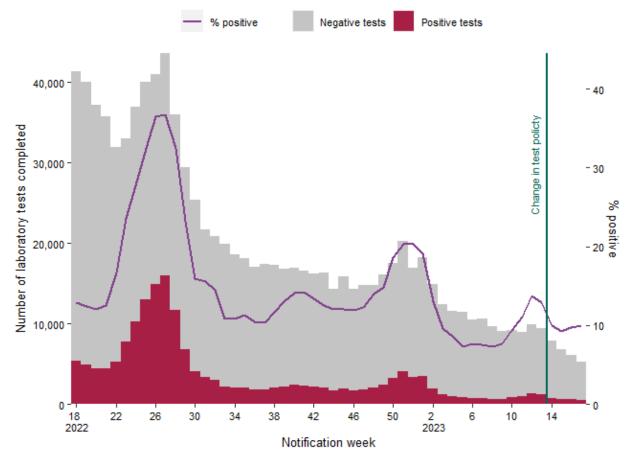

Figure 12: Number of completed laboratory tests by result and % positive tests⁷ in Ireland between week 18, 2022 and week 17, 2023. Data source: Deloitte Ireland LLP^{8 9}

⁷ Positive tests refer to all positive specimens and includes duplicates and individuals who were retested.

^{*s*} Since 28/02/2022 (week 9), PCR testing is only needed for symptomatic people in the community within certain risk groups: those who have not had booster vaccination and are aged 55 years and older; those with a high-risk medical conditions; those who are immunocompromised; those who live in the same household as a person who is immunocompromised; those who provide care or support for person they know to be immunocompromised; those who are pregnant; Healthcare Workers.

⁹ Since 30/03/2023 (week 13, 2023), community test centres closed and PCR testing was only performed based on clinical assessment.

Notes

Technical Notes

1. Data Source

Data are based on statutory notifications and were extracted from Computerised Infectious Disease Reporting (CIDR) system and the HSE COVID care tracker. Data are provisional and subject to ongoing review, validation and update. As a result, figures in this report may differ from previously published figures. Slide with Laboratory testing for SARS-CoV-2 data provided by Deloitte Ireland LLP

2. Epidemiological date

Epidemiological date is based on the earliest of dates available on the case and taken from date of onset of symptoms, date of diagnosis, laboratory specimen collection date, laboratory received date, laboratory reported date or event creation date/notification date on CIDR. By using this date rather than event creation/ notification date, adjusts for any delays in testing/notification. Further information on epidemiological dates and weeks can be found on the HPSC website.

3. Population data

Population data were taken from Census 2016. Data were aggregated into the following age groups for the analysis: 0-4 years, 5-12 years, 13-18 years, 19-24 years, 25-34 years, 35-44 years, 45-54 years, 55-64 years, 65-74 years, 75-84 years and \geq 85 years.

Acknowledgements

Sincere thanks are extended to all those who are participating in the collection of data and reporting of data used in these reports. This includes the HSE COVID-19 Contact Management Programme (CMP), staff in ICU units, notifying clinicians, laboratory staff, public health doctors, nurses, surveillance scientists, microbiologists and administrative staff.
