

# Weekly report on the epidemiology of COVID-19 in Ireland

## Week 14, 2023

- The epidemiological weeks in this report, run from Sunday to Saturday. Please refer to the [HPSC website](#) for a complete list of epidemiological weeks with start and end dates for 2020-2023.
- Data for this report are based on cases notified on the Computerised Infectious Disease Reporting (CIDR) up to midnight 08/04/2023. Data were extracted from CIDR system on 11/04/2023. Data are provisional and subject to ongoing review, validation and update. As a result, figures in this report may differ from previously published figures.
- Data should be interpreted in the context of the current testing policy. Testing policies can affect the number and age distribution of confirmed cases notified on CIDR. Information on the current testing policy in Ireland can be found [here](#)

## Key points

**Community COVID-19 testing centres closed from 30th March 2023, therefore, a decrease in number of confirmed COVID-19 cases is expected from week 13 (26/03/2023 to 01/04/2023).**

**Surveillance of COVID-19 is continuing across other systems not impacted by community testing (hospitalised cases, ICU, mortality, wastewater). Further information is available [here](#).**

### **Notified confirmed cases**

- In week 14 (between April 02 and April 08 2023) there were 682 new confirmed COVID-19 cases reported on CIDR. This is a decrease of 40.7% compared to week 13 when there were 1,151 confirmed COVID-19 cases notified.
- The highest number of new confirmed COVID-19 cases in week 14 was in the age group of 75-84 years with 22.1% of notified cases in week 14.

### **Laboratory data of SARS-CoV-2 PCR tests**

- In week 14, a total of 7,521 SARS-CoV-2 tests were performed, of which 758 (10.1%) were positive. This is a decrease compared to the previous week, 13, when 12.9% were positive.

### **Deaths**

- Since the start of the pandemic 8,810 COVID-19 deaths among notified COVID-19 cases have been reported on CIDR. Of these, 0 had a date of death in week 14.

**Table 1:** Summary characteristics of COVID-19 cases notified in Ireland during week 14, 2023 and 2023 to date

|  | Week 14, 2023 |            | Total 2023 |            |
|--|---------------|------------|------------|------------|
|  | Number        | Percentage | Number     | Percentage |
| Total number of confirmed cases                          | 682           |            | 15,313     |            |
| Incidence rate of confirmed cases per 100,000 population | 14.3          |            | 321.6      |            |
| Healthcare workers                                       | n/a**         |            | 1,901      | 12.41      |
| Healthcare workers where known                           |               |            |            | 22.02      |
| <b>Severe cases</b>                                      |               |            |            |            |
| Number of cases hospitalised                             | 341*          | 50.00      | 4,930*     | 32.19      |
| Number of cases admitted to ICU                          | 0*            | 0.00       | 58*        | 0.38       |
| Number of deaths among confirmed cases                   | 1*            | 0.15       | 227*       | 1.48       |

\* The number of cases hospitalised, cases admitted to ICU and deaths described in the above table relate only to COVID-19 cases who were notified during this reporting period, and where the outcome is known at the time of reporting. It does not reflect all hospitalisations, ICU admissions and deaths related to COVID-19 which occurred during the period covered by the report. It also does not reflect the final number of cases hospitalised, admitted to ICU or deaths for these cases notified during this period as the outcome may not yet have occurred, or is yet to be notified

\*\* Healthcare worker status is not reported this week due to a delay in the uploading of this information to CIDR

## Confirmed cases of COVID-19

Since the start of 2023, 15,313 confirmed COVID-19 cases have been notified on CIDR. In the past week, week 14 2023, 682 confirmed COVID-19 cases were reported on CIDR. This is a decrease of 40.7% compared to week 13 when 1,151 confirmed COVID-19 cases were notified. Figure 1 shows the epidemiological curve of COVID-19 cases notified in Ireland from week 1 2022 to week 14 2023. Data since the start of the pandemic is available on the [Epidemiology of COVID-19 in Ireland infohub](#).

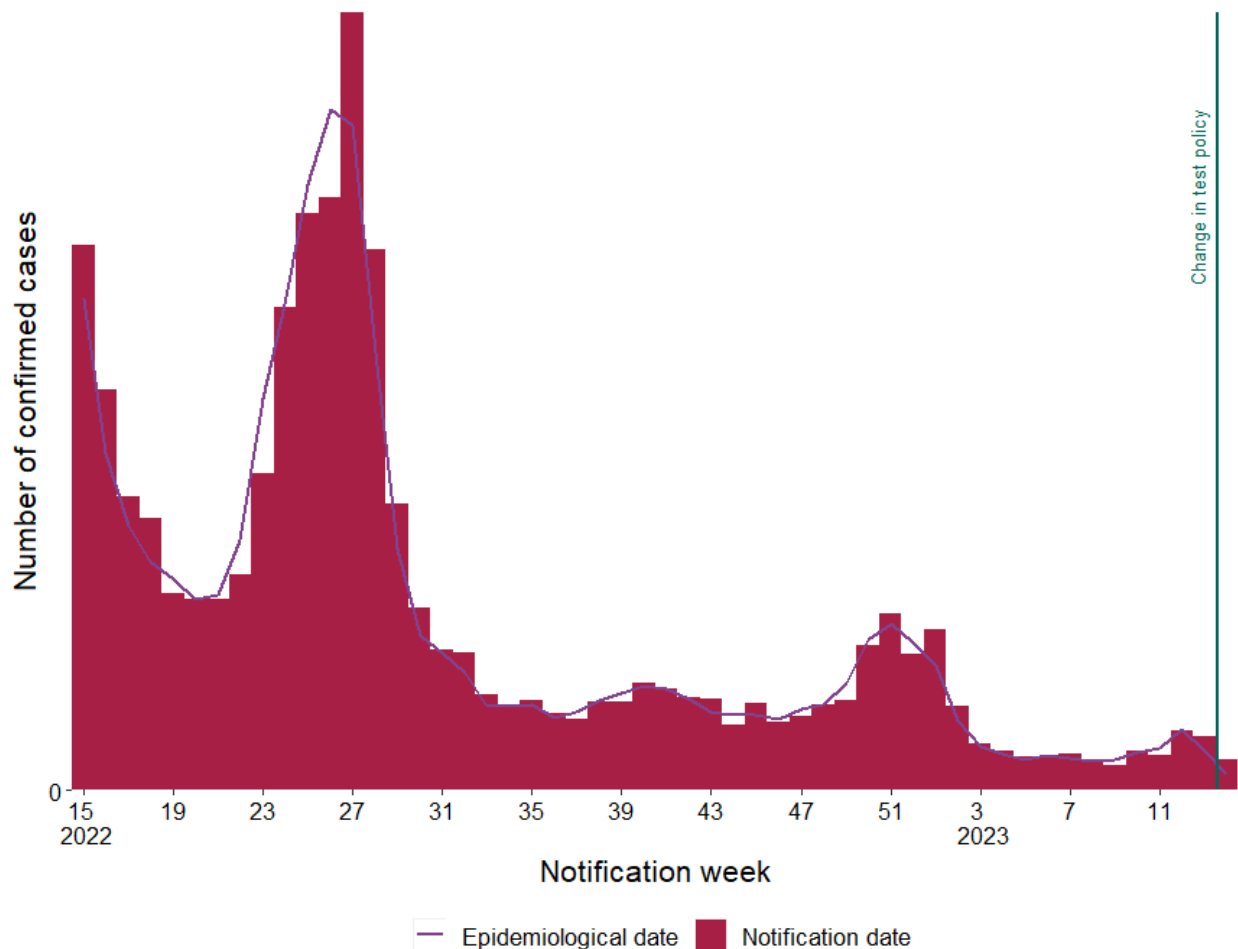

Figure 1a: Number of confirmed COVID-19 cases by notification week and epidemiological date in Ireland between week 15, 2022 and week 14, 2023. The red bars represent the number of confirmed cases by notification date. The purple line represents the number of cases by epidemiological date. The dark blue horizontal lines indicate a change in test policy<sup>1, 2</sup>

<sup>1</sup> Since 28/02/2022 (week 9, 2022), PCR testing was only needed for symptomatic people in the community within certain risk groups: those who have not had booster vaccination and are aged 55 years and older; those with a high-risk medical conditions; those who are immunocompromised; those who live in the same household as a person who is immunocompromised; those who provide care or support for person they know to be immunocompromised; those who are pregnant; Healthcare Workers.

<sup>2</sup> Since 30/03/2023 (week 13, 2023), community test centres closed and PCR testing was only performed based on clinical assessment.

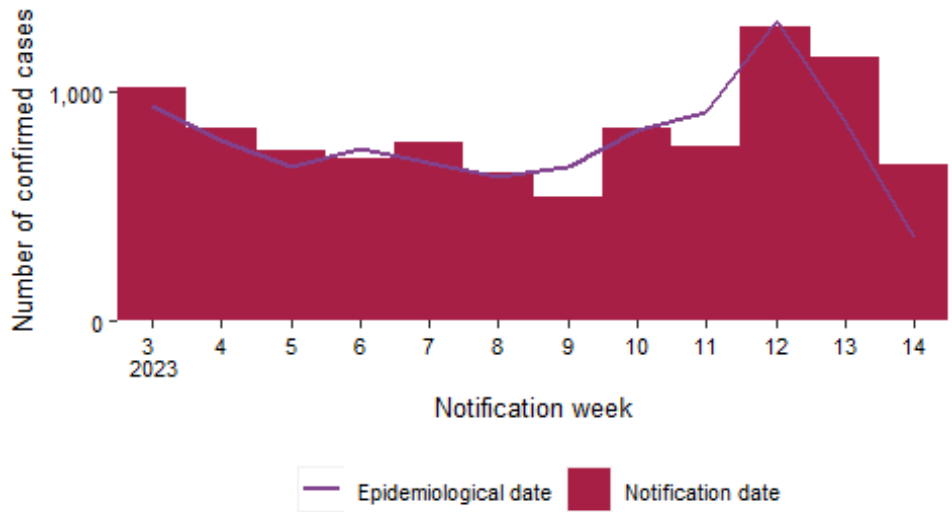

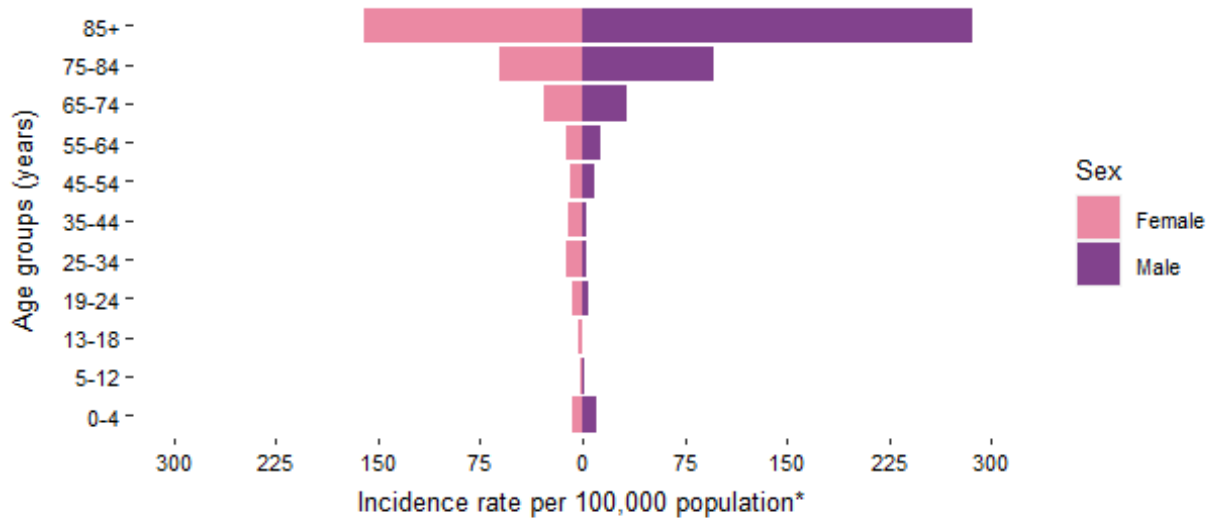

Figure 1b: Number of confirmed COVID-19 cases by notification week and epidemiological date in Ireland in the last 12 weeks. The red bars represent the number of confirmed cases by notification date. The purple line represents the number of cases by epidemiological date.

## Confirmed COVID-19 cases by age and sex

**Table 2:** Summary characteristics by age and sex of COVID-19 cases notified in Ireland during week 14, 2023 and 2023 to date

|                           | Week 14, 2023 |            | Total 2023 |            |
|---------------------------|---------------|------------|------------|------------|
|                           | Number        | Percentage | Number     | Percentage |
| <b>Gender</b>             |               |            |            |            |
| Males                     | 322           | 47.2       | 6,189      | 40.4       |
| Females                   | 357           | 52.3       | 9,120      | 59.6       |
| M:F ratio                 | 0.9           |            | 0.68       |            |
| <b>Age (years)</b>        |               |            |            |            |
| Mean age                  | 63            |            | 54         |            |
| Median age                | 70            |            | 53         |            |
| Age range                 | 0 - 102       |            | 0 - 102    |            |
| <b>Age groups (years)</b> |               |            |            |            |
| 0-4                       | 28            | 4.1        | 448        | 2.9        |
| 5-12                      | 6             | 0.9        | 165        | 1.1        |
| 13-18                     | 6             | 0.9        | 222        | 1.4        |
| 19-24                     | 20            | 2.9        | 629        | 4.1        |
| 25-34                     | 53            | 7.8        | 1,892      | 12.4       |
| 35-44                     | 49            | 7.2        | 2,362      | 15.4       |
| 45-54                     | 55            | 8.1        | 2,207      | 14.4       |
| 55-64                     | 64            | 9.4        | 1,935      | 12.6       |
| 65-74                     | 113           | 16.6       | 1,702      | 11.1       |
| 75-84                     | 151           | 22.1       | 2,133      | 13.9       |
| 85+                       | 137           | 20.1       | 1,615      | 10.5       |
| Unknown                   | NA            | 0.0        | 3          | 0.0        |

\*Excluding 0 for whom age is unknown, 2 for whom sex is unknown and 0 for whom both are unknown

## Cases and incidence by county

**Table 3:** Characteristics of confirmed COVID-19 cases by county and descending incidence rate per 100,000 notified in Ireland, during week 14, 2023\*

| County    | Number of cases | Percent | Incidence rate per 100,000 |
|-----------|-----------------|---------|----------------------------|
| Louth     | 52              | 7.6     | 40.3                       |
| Laois     | 22              | 3.2     | 26.0                       |
| Cavan     | 19              | 2.8     | 24.9                       |
| Monaghan  | 14              | 2.1     | 22.8                       |
| Mayo      | 27              | 4.0     | 20.7                       |
| Roscommon | 13              | 1.9     | 20.1                       |
| Offaly    | 15              | 2.2     | 19.2                       |
| Leitrim   | 6               | 0.9     | 18.7                       |
| Waterford | 21              | 3.1     | 18.1                       |
| Kerry     | 24              | 3.5     | 16.2                       |
| Carlow    | 9               | 1.3     | 15.8                       |
| Limerick  | 30              | 4.4     | 15.4                       |
| Galway    | 37              | 5.4     | 14.3                       |
| Dublin    | 191             | 28.0    | 14.2                       |
| Donegal   | 22              | 3.2     | 13.8                       |
| Tipperary | 21              | 3.1     | 13.2                       |
| Wexford   | 19              | 2.8     | 12.7                       |
| Sligo     | 8               | 1.2     | 12.2                       |
| Kilkenny  | 12              | 1.8     | 12.1                       |
| Cork      | 61              | 8.9     | 11.2                       |
| Westmeath | 8               | 1.2     | 9.0                        |
| Meath     | 17              | 2.5     | 8.7                        |
| Wicklow   | 12              | 1.8     | 8.4                        |
| Clare     | 8               | 1.2     | 6.7                        |
| Kildare   | 13              | 1.9     | 5.8                        |
| Longford  | 1               | 0.1     | 2.4                        |

\* County data may not be accurately reflected in the most recent week due to ongoing data validations

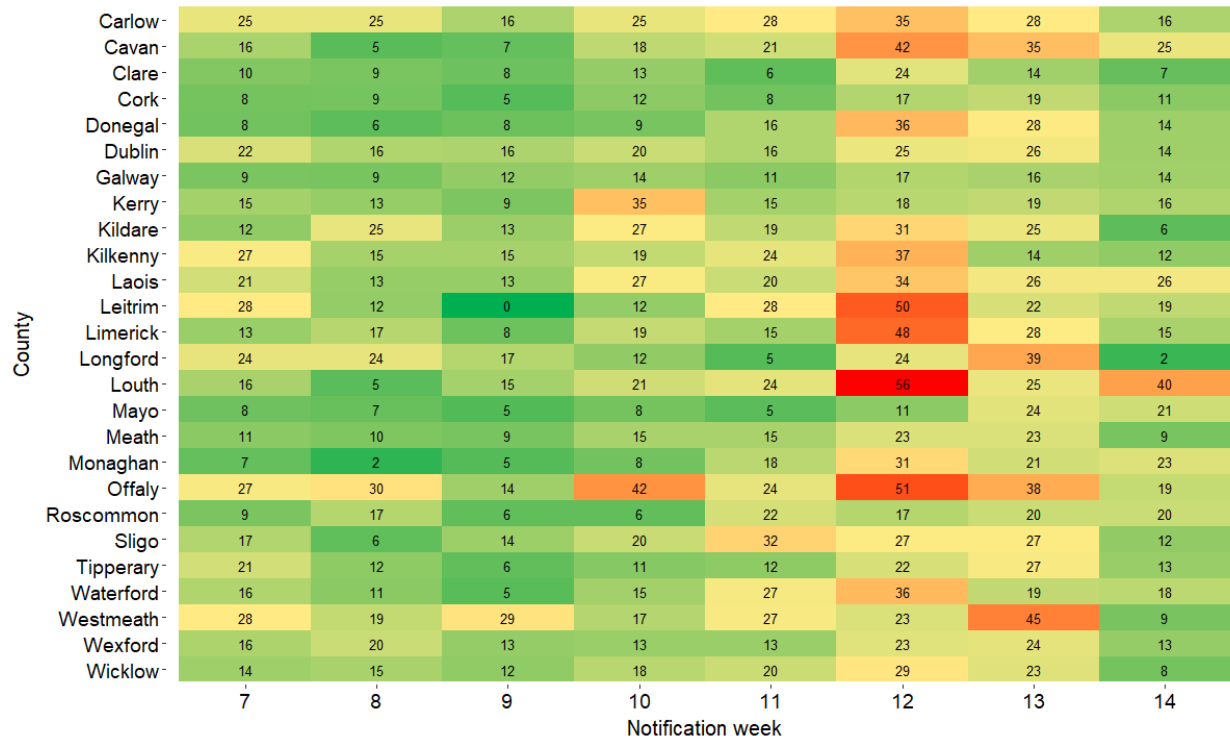

Figure 4: Heat map of weekly incidence rates of confirmed COVID-19 cases per 100,000 population, by county, notified in Ireland for the last 8 weeks

## Hospitalisations

A total of 341 hospitalised confirmed COVID-19 cases were recorded in the latest epidemiological week, week 14 2023.

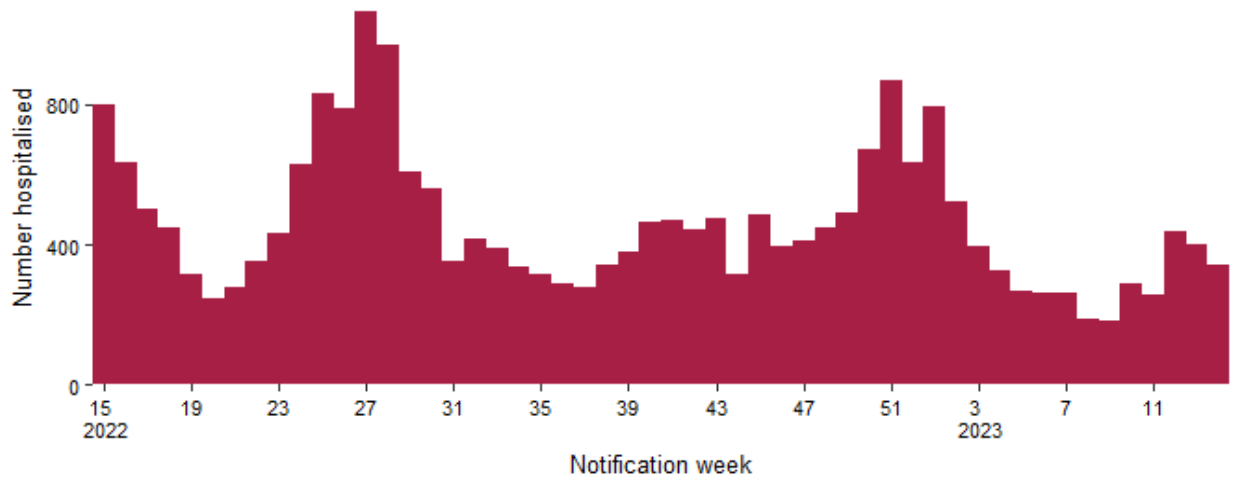

Figure 5: Hospitalisations among confirmed COVID-19 cases notified on CIDR in Ireland between week 15, 2022 and week 14, 2023

**Table 4:** Number of COVID-19 cases and hospital admissions by age group in Ireland for week<sup>3</sup> 14, 2023 based on week of notification<sup>4</sup>

| Age group | Week 14, 2023   |                    |            | Total 2023      |                    |            |
|-----------|-----------------|--------------------|------------|-----------------|--------------------|------------|
|           | Total cases     | Hospitalised cases |            | Total cases     | Hospitalised cases |            |
|           | Number of cases | Number of cases    | Percentage | Number of cases | Number of cases    | Percentage |
| 0-4       | 28              | 16                 | 57.1       | 448             | 247                | 55.1       |
| 5-12      | 6               | 3                  | 50.0       | 165             | 53                 | 32.1       |
| 13-18     | 6               | 2                  | 33.3       | 222             | 51                 | 23.0       |
| 19-24     | 20              | 7                  | 35.0       | 629             | 95                 | 15.1       |
| 25-34     | 53              | 16                 | 30.2       | 1,892           | 223                | 11.8       |
| 35-44     | 49              | 13                 | 26.5       | 2,362           | 250                | 10.6       |
| 45-54     | 55              | 16                 | 29.1       | 2,207           | 308                | 14.0       |
| 55-64     | 64              | 36                 | 56.2       | 1,935           | 489                | 25.3       |
| 65-74     | 113             | 71                 | 62.8       | 1,702           | 958                | 56.3       |
| 75-84     | 151             | 90                 | 59.6       | 2,133           | 1,340              | 62.8       |
| 85+       | 137             | 71                 | 51.8       | 1,615           | 916                | 56.7       |
| Unknown   | 0               | 0                  | 0.0        | 3               | 0                  | 0.0        |

<sup>3</sup> Hospitalisations may be underestimated for recent weeks as the outcome may not yet have occurred or may not yet have been reported to CIDR

<sup>4</sup> Data are based on the date the case was notified on CIDR, and not the date of hospital admission

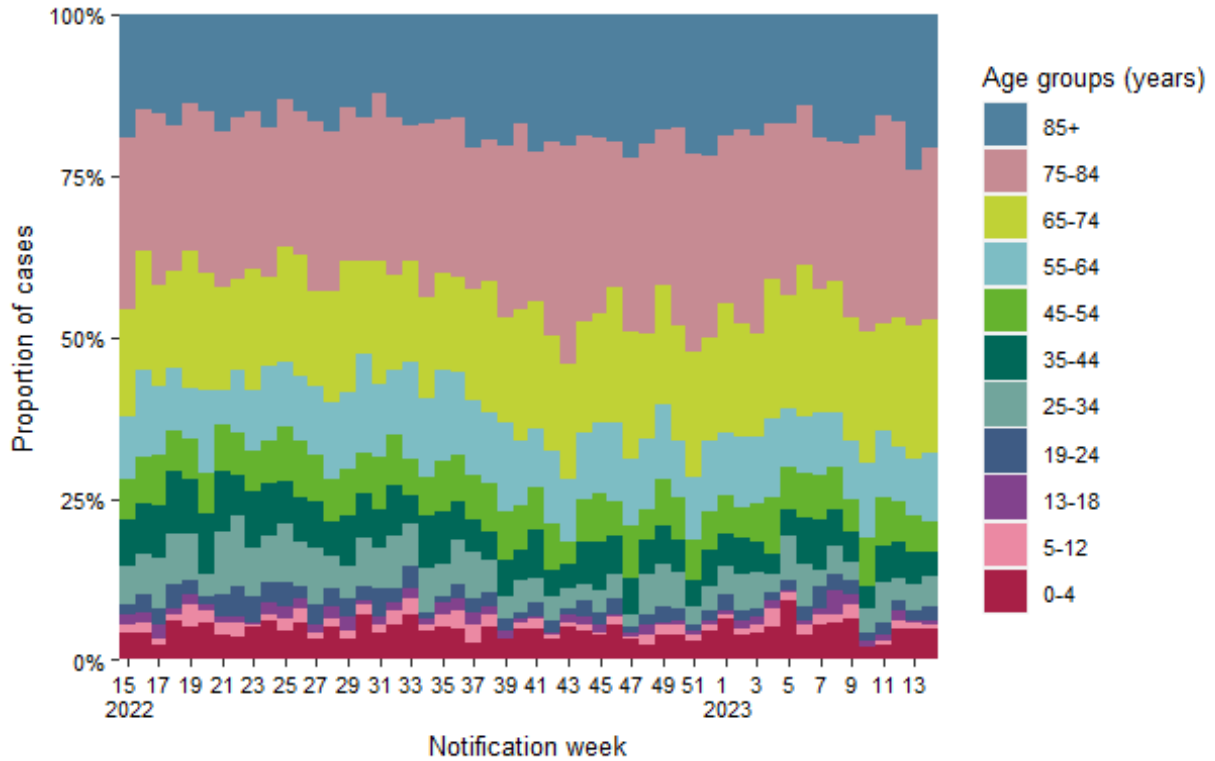

Figure 6: Age distribution of hospitalised confirmed COVID-19 cases notified on CIDR in Ireland between week 15, 2022 and week 14, 2023

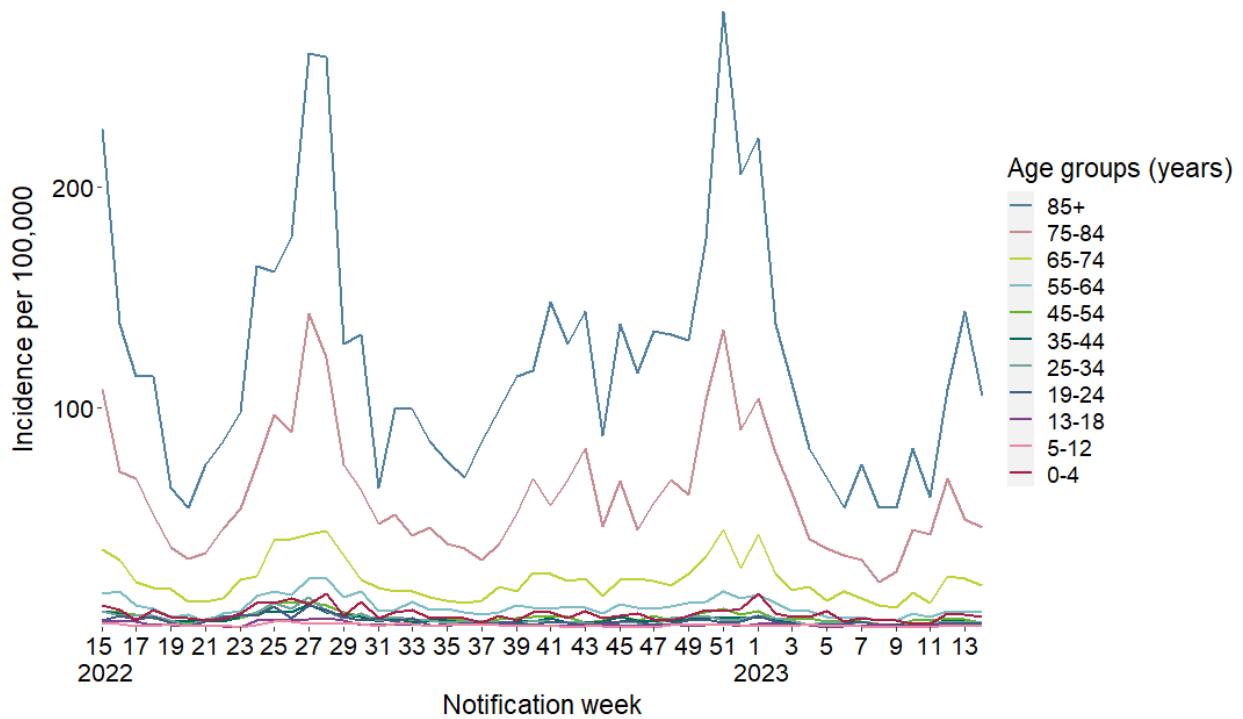

Figure 7: Incidence rate by age group of hospitalisations among confirmed COVID-19 cases on CIDR in Ireland between week 15, 2022 and week 14, 2023

## ICU admissions

A total of 0 COVID-19 cases were admitted to ICU in the latest epidemiological week<sup>6</sup>, week 14 2023.

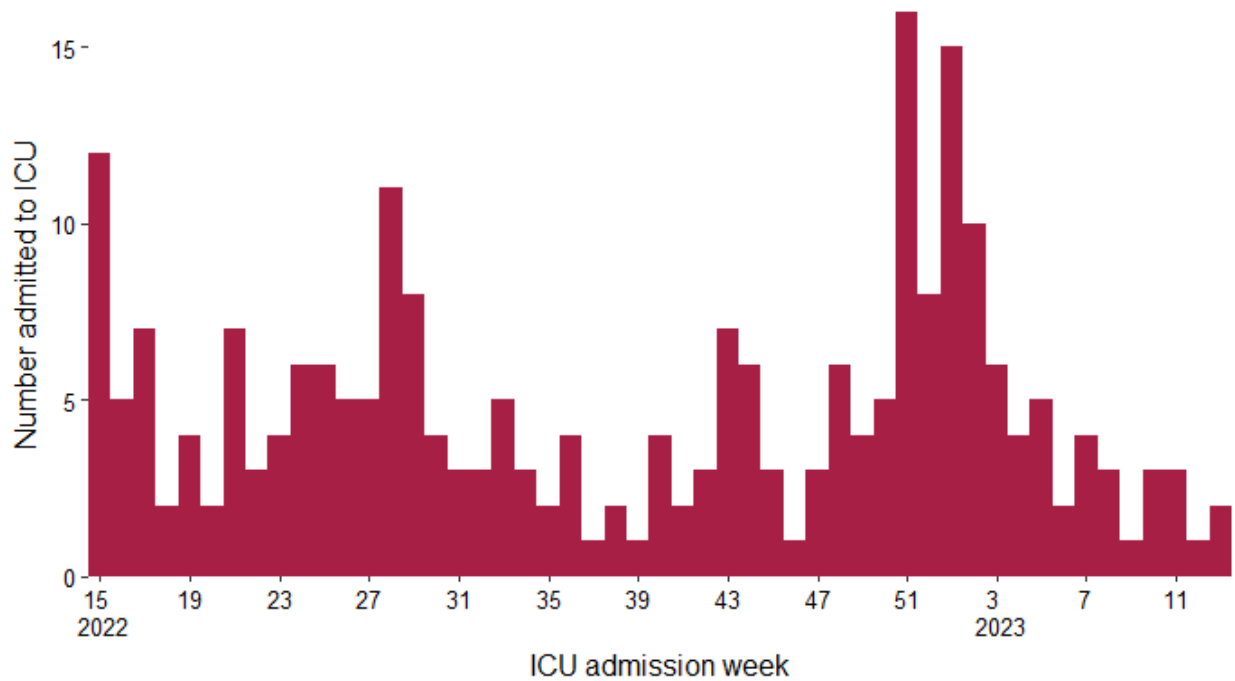

Figure 8: Number of ICU COVID-19 ICU admissions in Ireland by week of ICU admission, between week 15, 2022 and week 14, 2023<sup>5</sup>

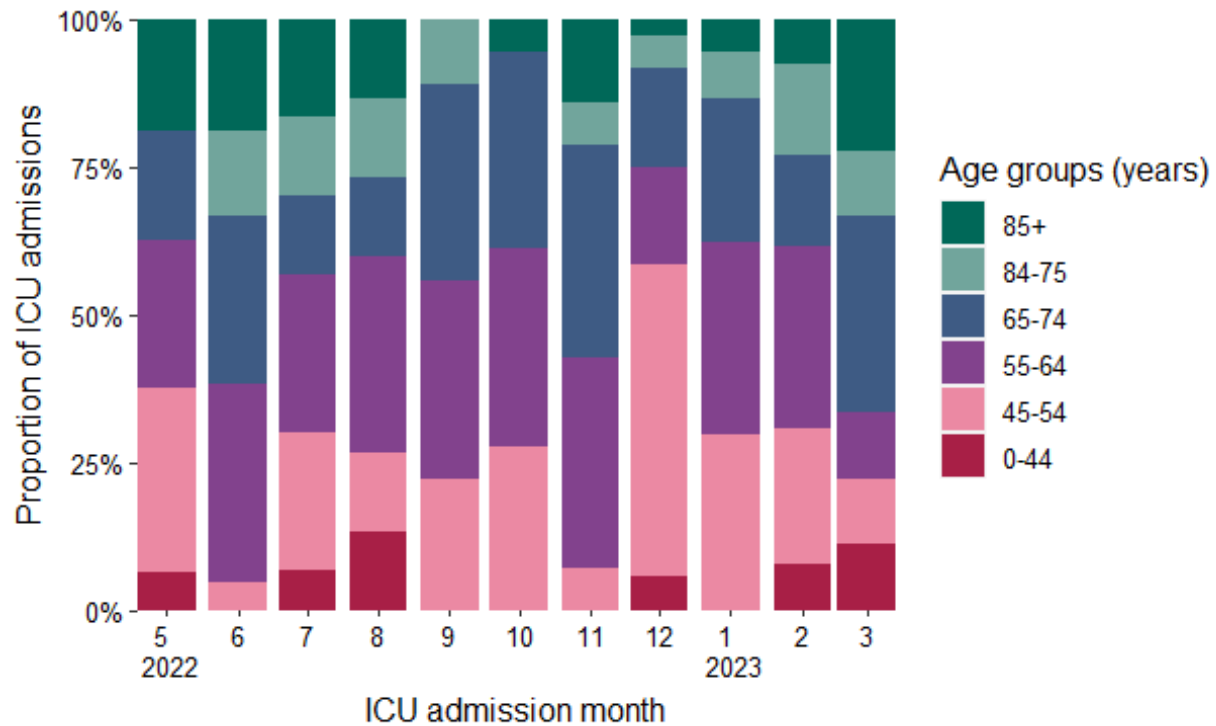

Figure 9: Age distribution of confirmed COVID-19 cases admitted to ICU by month of admission May, 2022 and April, 2023

<sup>5</sup> Please note that most recent weeks may not yet reflect all admissions

## Deaths

Please note the below figures and tables include all cases (confirmed, probable and possible) who have died.

A total of 0 cases had a date of death in the latest epidemiological week, 14. The mean and median age of those who died in the previous epidemiological week was NaN and NA years respectively.

150 -

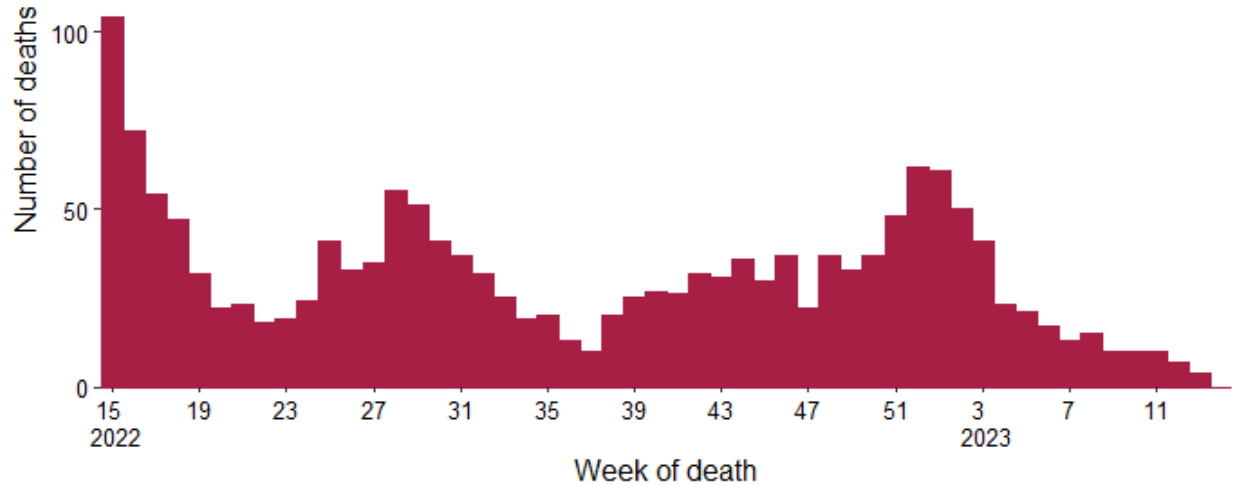

Figure 10: Total number of COVID-19 deaths notified by week of death, cases with a date of notification from week 15, 2022 to 14, 2023<sup>6</sup>. Date of death missing for 0 of the reported deaths

<sup>6</sup> Please note that most recent weeks may not yet reflect all deaths

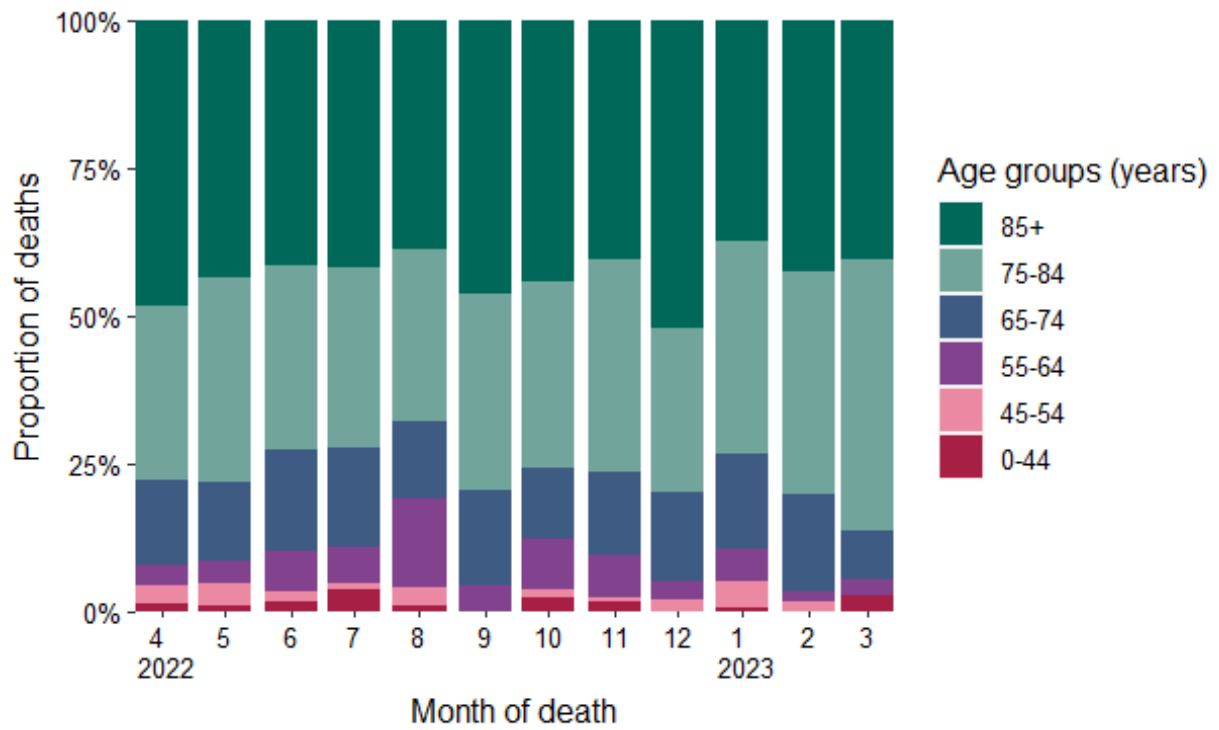

Figure 11: Age distribution of COVID-19 deaths notified on CIDR in Ireland between May, 2022 and April, 2023

## Laboratory data of SARS-CoV-2 PCR tests

In week 14, a total of 7,521 SARS-CoV-2 tests were performed, of which 758 (10.1%) were positive.

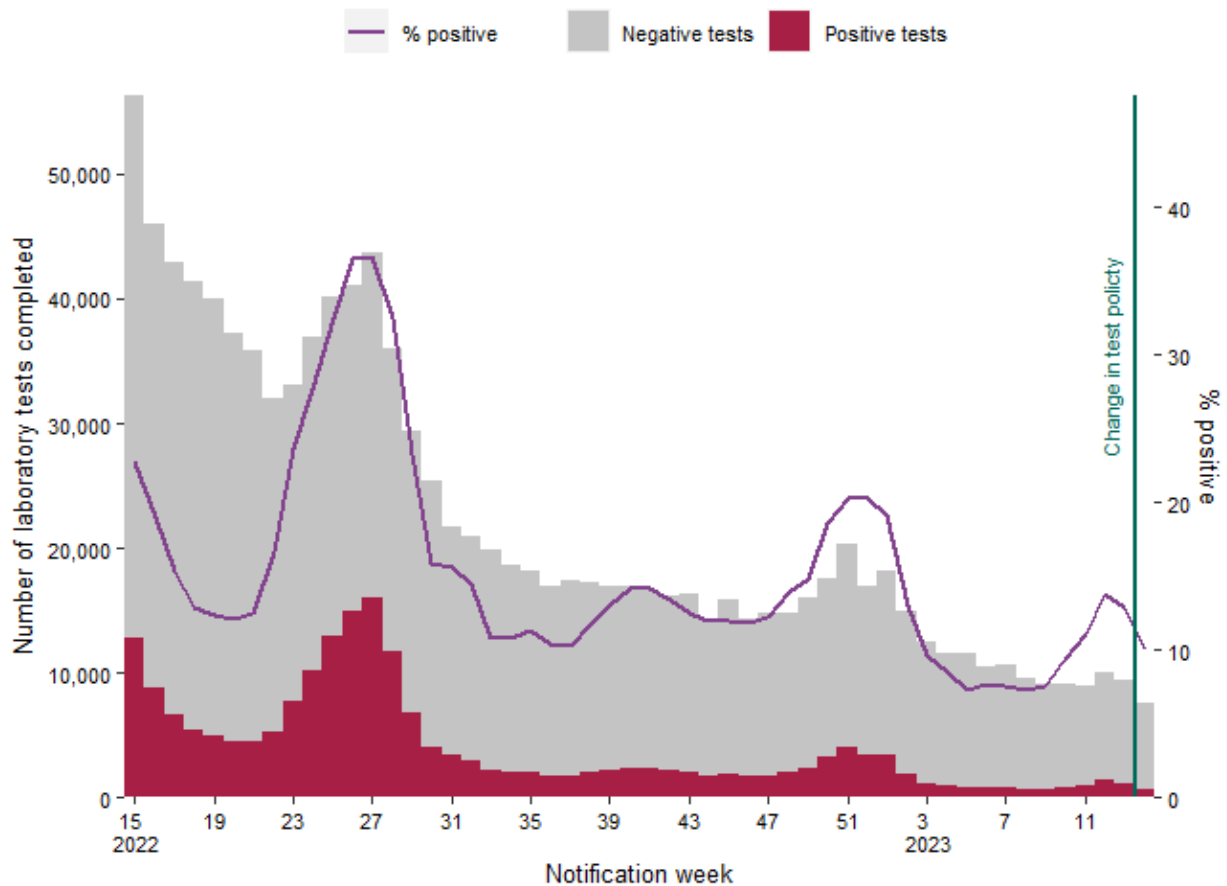

Figure 12: Number of completed laboratory tests by result and % positive tests<sup>7</sup> in Ireland between week 15, 2022 and week 14, 2023. Data source: Deloitte Ireland LLP<sup>8, 9</sup>

<sup>7</sup> Positive tests refer to all positive specimens and includes duplicates and individuals who were retested.

<sup>8</sup> Since 28/02/2022 (week 9), PCR testing is only needed for symptomatic people in the community within certain risk groups: those who have not had booster vaccination and are aged 55 years and older; those with a high-risk medical conditions; those who are immunocompromised; those who live in the same household as a person who is immunocompromised; those who provide care or support for person they know to be immunocompromised; those who are pregnant; Healthcare Workers.

<sup>9</sup> Since 30/03/2023 (week 13, 2023), community test centres closed and PCR testing was only performed based on clinical assessment.

### Technical Notes

#### 1. Data Source

Data are based on statutory notifications and were extracted from Computerised Infectious Disease Reporting (CIDR) system and the HSE COVID care tracker. Data are provisional and subject to ongoing review, validation and update. As a result, figures in this report may differ from previously published figures. Slide with Laboratory testing for SARS-CoV-2 data provided by Deloitte Ireland LLP

#### 2. Epidemiological date

Epidemiological date is based on the earliest of dates available on the case and taken from date of onset of symptoms, date of diagnosis, laboratory specimen collection date, laboratory received date, laboratory reported date or event creation date/notification date on CIDR. By using this date rather than event creation/ notification date, adjusts for any delays in testing/notification. Further information on epidemiological dates and weeks can be found on the [HPSC website](#).

#### 3. Population data

Population data were taken from Census 2016. Data were aggregated into the following age groups for the analysis: 0-4 years, 5-12 years, 13-18 years, 19-24 years, 25-34 years, 35-44 years, 45-54 years, 55-64 years, 65-74 years, 75-84 years and  $\geq 85$  years.

### Acknowledgements

Sincere thanks are extended to all those who are participating in the collection of data and reporting of data used in these reports. This includes the HSE COVID-19 Contact Management Programme (CMP), staff in ICU units, notifying clinicians, laboratory staff, public health doctors, nurses, surveillance scientists, microbiologists and administrative staff.
