

# Weekly report on the epidemiology of COVID-19 in Ireland

## Week 47, 2023

- The epidemiological weeks in this report, run from Sunday to Saturday. Please refer to the [HPSC website](#) for a complete list of epidemiological weeks with start and end dates for 2020-2023.
- Data for this report are based on cases notified on the Computerised Infectious Disease Reporting (CIDR) up to midnight 25/11/2023. Data were extracted from CIDR system on 28/11/2023. Data are provisional and subject to ongoing review, validation, and update. As a result, figures in this report may differ from previously published figures.
- Data should be interpreted in the context of the current testing policy. Testing policies can affect the number and age distribution of confirmed cases notified on CIDR. Information on the current testing policy in Ireland can be found [here](#)
- **From week 47, 2023 this report uses population data from Census 2022. Rates may therefore differ from those reported previously which used population data from Census 2016.**

## Key points

### Notified confirmed cases

- In week 47 (between November 19 and November 25 2023) there were 424 new confirmed COVID-19 cases reported on CIDR. This is a decrease of 12.4% compared to week 46 when there were 484 confirmed COVID-19 cases notified.
- The highest number of new confirmed COVID-19 cases in week 47 was in the age group of 75-84 years with 23.1% of notified cases in week 47.

### Laboratory data of SARS-CoV-2 PCR tests

- In week 47, a total of 4,790 SARS-CoV-2 tests were performed, of which 385 (8%) were positive. This is a decrease compared to the previous week, 46, when 10% were positive.

### Deaths

- Since the start of the pandemic 9,391 COVID-19 deaths among notified COVID-19 cases have been reported on CIDR. Of these, 0 had a date of death in week 47.

**Table 1:** Summary characteristics of COVID-19 cases notified in Ireland during week 47, 2023 and 2023 to date

	Week 47, 2023		Total 2023	
	Number	Percentage	Number	Percentage
Total number of confirmed cases	424		32,305	
Incidence rate of confirmed cases per 100,000 population	8.2		627.4	
<b>Severe cases</b>				
Number of cases hospitalised	174*	41.04	13,721*	42.47
Number of cases admitted to ICU	3*	0.71	141*	0.44
Number of deaths among confirmed cases	0*	0.00	712*	2.20

\* The number of cases hospitalised, cases admitted to ICU and deaths described in the above table relate only to COVID-19 cases who were notified during this reporting period, and where the outcome is known at the time of reporting. It does not reflect all hospitalisations, ICU admissions and deaths related to COVID-19 which occurred during the period covered by the report. It also does not reflect the final number of cases hospitalised, admitted to ICU or deaths for these cases notified during this period as the outcome may not yet have occurred, or is yet to be notified

## Confirmed cases of COVID-19

Since the start of 2023, a total of 32,305 confirmed COVID-19 cases have been notified on CIDR. In the past week, week 47 2023, 424 confirmed COVID-19 cases were reported on CIDR. This is a decrease of 12.4% compared to week 46 when 484 confirmed COVID-19 cases were notified. Figure 1 shows the epidemiological curve of COVID-19 cases notified in Ireland for the last one year to week 47 2023. Data since the start of the pandemic is available on the [Epidemiology of COVID-19 in Ireland infohub](#).

The red bars represent the number of confirmed cases by notification date. The purple line represents the number of cases by epidemiological date. The dark blue horizontal lines indicate a change in test policy<sup>1</sup>

<sup>1</sup> Since 30/03/2023 (week 13, 2023), community test centres closed and PCR testing was only performed based on clinical assessment.

<sup>6</sup> Positive tests refer to all positive specimens and includes duplicates and individuals who were retested.

<sup>7</sup> Since 30/03/2023 (week 13, 2023), community test centres closed and PCR testing was only performed based on clinical assessment.

## Notes

### Technical Notes

#### 1. Data Source

Data are based on statutory notifications and were extracted from Computerised Infectious Disease Reporting (CIDR) system and the HSE COVID care tracker. Data are provisional and subject to ongoing review, validation and update. As a result, figures in this report may differ from previously published figures. Slide with Laboratory testing for SARS-CoV-2 data provided by Deloitte Ireland LLP

#### 2. Epidemiological date

Epidemiological date is based on the earliest of dates available on the case and taken from date of onset of symptoms, date of diagnosis, laboratory specimen collection date, laboratory received date, laboratory reported date or event creation date/notification date on CIDR. By using this date rather than event creation/ notification date, adjusts for any delays in testing/notification. Further information on epidemiological dates and weeks can be found on the [HPSC website](#).

#### 3. Population data

Population data were taken from Census 2022. Data were aggregated into the following age groups for the analysis: 0-4 years, 5-12 years, 13-18 years, 19-24 years, 25-34 years, 35-44 years, 45-54 years, 55-64 years, 65-74 years, 75-84 years and  $\geq 85$  years.
