

Weekly report on the epidemiology of COVID-19 in Ireland

Week 36, 2023

- The epidemiological weeks in this report, run from Sunday to Saturday. Please refer to the [HPSC website](#) for a complete list of epidemiological weeks with start and end dates for 2020-2023.
- Data for this report are based on cases notified on the Computerised Infectious Disease Reporting (CIDR) up to midnight 09/09/2023. Data were extracted from CIDR system on 12/09/2023. Data are provisional and subject to ongoing review, validation and update. As a result, figures in this report may differ from previously published figures.
- Data should be interpreted in the context of the current testing policy. Testing policies can affect the number and age distribution of confirmed cases notified on CIDR. Information on the current testing policy in Ireland can be found [here](#)

Key points

Notified confirmed cases

- In week 36 (between September 03 and September 09 2023) there were 826 new confirmed COVID-19 cases reported on CIDR. This is an increase of 15.2% compared to week 35 when there were 717 confirmed COVID-19 cases notified.
- The highest number of new confirmed COVID-19 cases in week 36 was in the age group of 75-84 years with 23.2% of notified cases in week 36.

Laboratory data of SARS-CoV-2 PCR tests

- In week 36, a total of 4,593 SARS-CoV-2 tests were performed, of which 775 (16.9%) were positive. This is a decrease compared to the previous week, 35, when 17.4% were positive.

Deaths

- Since the start of the pandemic 9,209 COVID-19 deaths among notified COVID-19 cases have been reported on CIDR. Of these, 1 had a date of death in week 36.

Table 1: Summary characteristics of COVID-19 cases notified in Ireland during week 36, 2023 and 2023 to date

	Week 36, 2023		Total 2023	
	Number	Percentage	Number	Percentage
Total number of confirmed cases	826		26,070	
Incidence rate of confirmed cases per 100,000 population	17.3		547.5	
Severe cases				
Number of cases hospitalised	392*	47.46	10,601*	40.66
Number of cases admitted to ICU	0*	0.00	109*	0.42
Number of deaths among confirmed cases	3*	0.36	545*	2.09

* The number of cases hospitalised, cases admitted to ICU and deaths described in the above table relate only to COVID-19 cases who were notified during this reporting period, and where the outcome is known at the time of reporting. It does not reflect all hospitalisations, ICU admissions and deaths related to COVID-19 which occurred during the period covered by the report. It also does not reflect the final number of cases hospitalised, admitted to ICU or deaths for these cases notified during this period as the outcome may not yet have occurred, or is yet to be notified

Confirmed cases of COVID-19

Since the start of 2023, a total of 26,070 confirmed COVID-19 cases have been notified on CIDR. In the past week, week 36 2023, 826 confirmed COVID-19 cases were reported on CIDR. This is an increase of 15.2% compared to week 35 when 717 confirmed COVID-19 cases were notified. Figure 1 shows the epidemiological curve of COVID-19 cases notified in Ireland for the last one year to week 36 2023. Data since the start of the pandemic is available on the [Epidemiology of COVID-19 in Ireland infohub](#).

The dark blue horizontal lines indicate a change in test policy^{1 2}

¹ Since 28/02/2022 (week 9, 2022), PCR testing was only needed for symptomatic people in the community within certain risk groups: those who have not had booster vaccination and are aged 55 years and older; those with a high-risk medical conditions; those who are immunocompromised; those who live in the same household as a person who is immunocompromised; those who provide care or support for person they know to be immunocompromised; those who are pregnant; Healthcare Workers.

² Since 30/03/2023 (week 13, 2023), community test centres closed and PCR testing was only performed based on clinical assessment.

⁷ Positive tests refer to all positive specimens and includes duplicates and individuals who were retested.

⁸ Since 28/02/2022 (week 9), PCR testing is only needed for symptomatic people in the community within certain risk groups: those who have not had booster vaccination and are aged 55 years and older; those with a high-risk medical conditions; those who are immunocompromised; those who live in the same household as a person who is immunocompromised; those who provide care or support for person they know to be immunocompromised; those who are pregnant; Healthcare Workers.

⁹ Since 30/03/2023 (week 13, 2023), community test centres closed and PCR testing was only performed based on clinical assessment.

Notes

Technical Notes

1. Data Source

Data are based on statutory notifications and were extracted from Computerised Infectious Disease Reporting (CIDR) system and the HSE COVID care tracker. Data are provisional and subject to ongoing review, validation and update. As a result, figures in this report may differ from previously published figures. Slide with Laboratory testing for SARS-CoV-2 data provided by Deloitte Ireland LLP

2. Epidemiological date

Epidemiological date is based on the earliest of dates available on the case and taken from date of onset of symptoms, date of diagnosis, laboratory specimen collection date, laboratory received date, laboratory reported date or event creation date/notification date on CIDR. By using this date rather than event creation/ notification date, adjusts for any delays in testing/notification. Further information on epidemiological dates and weeks can be found on the [HPSC website](#).

3. Population data

Population data were taken from Census 2016. Data were aggregated into the following age groups for the analysis: 0-4 years, 5-12 years, 13-18 years, 19-24 years, 25-34 years, 35-44 years, 45-54 years, 55-64 years, 65-74 years, 75-84 years and ≥ 85 years.
