

Influenza Surveillance in Ireland – Summary Report

Influenza Weeks 29 & 30 2013 (15th – 28th July 2013)

During the summer period, short summary reports of influenza activity will be published. www.hpsc.ie

Summary

- **Overall, influenza activity in Ireland remained at low levels during weeks 29 and 30 2013.**
- The sentinel GP influenza-like illness (ILI) consultation rate was 1.0 per 100,000 population in week 30 2013, remaining low and stable compared to the updated rate of 1.4 per 100,000 during week 29 2013.
 - ♦ ILI rates were below the Irish baseline threshold (21.0 per 100,000 population).
 - ♦ Age specific ILI rates remained low in all age groups.
- The proportion of influenza-related calls to GP Out-of-Hours services remained at low levels.
- No influenza positive specimens were reported from the NVRL for week 29 or 30 2013.
- No influenza positive sentinel GP specimens have been detected since week 21 2013.
- Positivity levels remained low for parainfluenza viruses, human metapneumovirus (hMPV), respiratory syncytial virus (RSV) and adenoviruses during weeks 29 and 30 2013.
- One confirmed influenza hospitalised case was notified during weeks 29 and 30 2013.
- There have been no reports of any confirmed influenza-associated deaths occurring during the summer period to date (between weeks 21 and 30 2013).
- No new acute respiratory outbreaks were reported to HPSC during weeks 29 and 30 2013. To date this summer, four acute respiratory outbreaks (two associated with parainfluenza virus type 3, one associated with influenza B and one with hMPV) were reported, all in residential institutions/long stay units.
- The latest [WHO](#) and [ECDC](#) influenza surveillance reports are showing low levels of influenza transmission in the northern hemisphere temperate zones.
- For up to date information on human infection with avian influenza A(H7N9) virus in China including the current case numbers and the WHO assessment of the situation please see [here](#). The European Centre for Disease Prevention and Control has published additional information including an updated rapid risk assessment of the situation, see [here](#).
- Information on Middle Eastern Respiratory Syndrome Coronavirus (MERS-CoV), including the latest ECDC rapid risk assessment of 22nd July is available on the [ECDC website](#). Further information and guidance documents are also available on the [HPSC website](#).

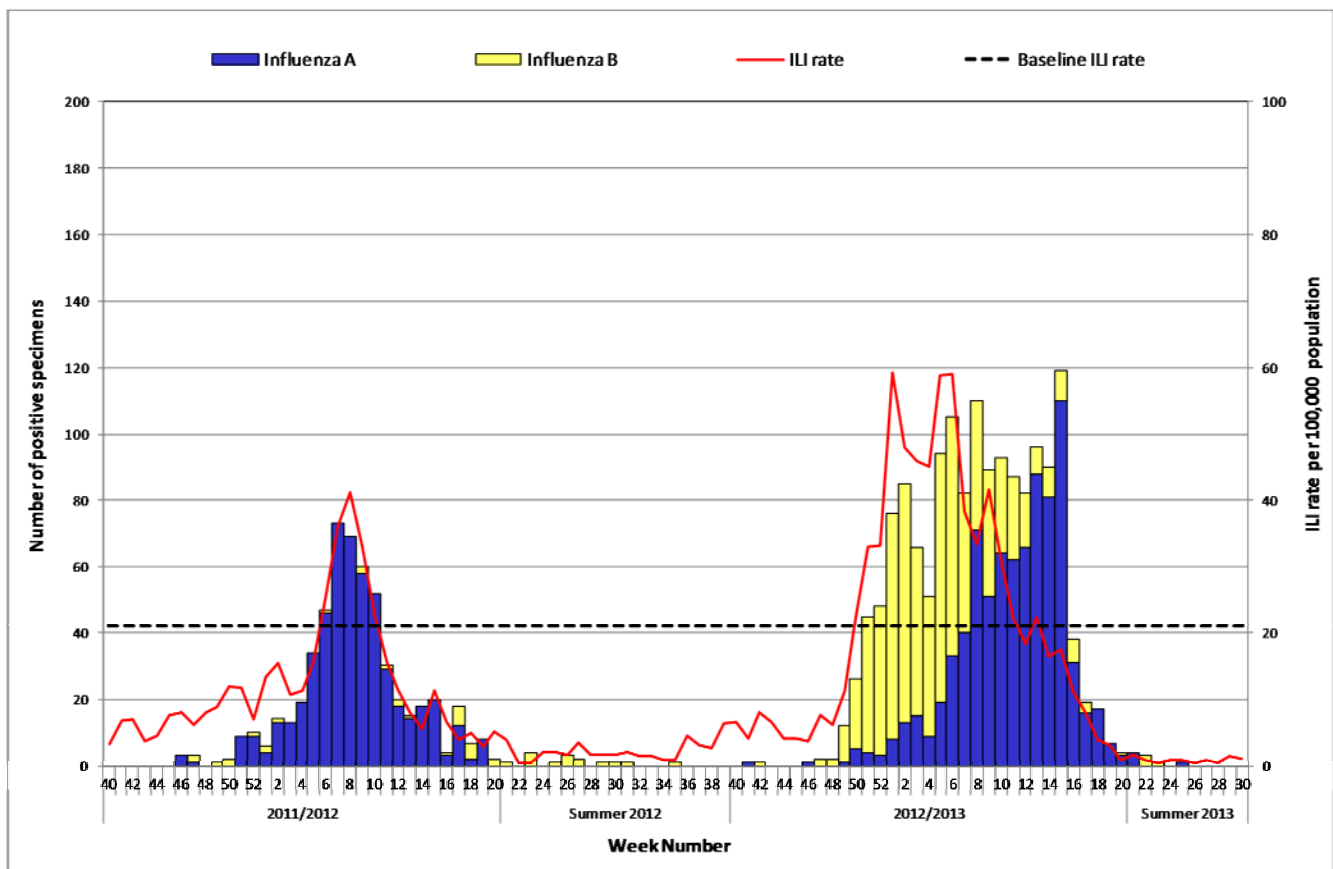

Figure 1. ILI sentinel GP consultation rates per 100,000 population, baseline ILI threshold rate, and number of positive influenza A and B specimens tested by the NVRL, by influenza week and season.

Acknowledgements

This report was prepared by Lisa Domegan and Joan O'Donnell, HPSC. HPSC wishes to thank the sentinel GPs, the ICGP, NVRL, Departments of Public Health, ICSI and HSE-NE for providing data for this report.

*Sentinel GP consultations and virological data are updated on an ongoing basis, ILI rates and virological data are adjusted accordingly.
