

Uptake of the Seasonal Influenza Vaccine in Acute Hospitals and Long-Term Care/Residential Facilities in Ireland from 2011-2012 to 2023-2024

Health Protection Surveillance Centre
July 2024

Background

- Slideset relates to influenza vaccination uptake among health care workers (HCWs) and residents in long term/residential care facilities (LTCFs/RCFs) for the 2023-2024 influenza season
- Uptake in HCWs in 55 hospitals (including four private) and 217 LTCFs (including 157 HSE funded and staffed) presented
- Uptake among residents (permanent and those admitted for respite care) in LTCFs/RCFs estimated by staff in LTCFs carrying out a point prevalence survey (PPS) between 11th and 15th December 2023

Methods

- Links to separate HCW-based online survey forms for hospitals and LTCFs/RCFs sent to each healthcare facility twice during the influenza season (6th November 2023 & 23rd February 2024)
- Link to resident-based PPS online form distributed to LTCFs/RCFs on 6th December 2023
- Qualtrics® designed survey forms capture aggregate data on the number of HCWs and residents eligible for vaccination and the number vaccinated
