

CIDR Event ID

Section A: Patient Information

Patient clinic ID:

Date of Birth: Sex: Female Male Other Unknown

Place of residence (and postcode if Dublin):

Country of birth: Ireland Other, please specify

Previous gonorrhoea infection: Yes No Unknown

HIV status: Negative Positive Unknown

Section B: Case details

Specimen ID:

Referring clinician:

Probable country of infection:
 Ireland Other, please specify

Likely mode of transmission:
 MSM Heterosexual Other Unknown

At this incidence of infection is the patient known to be co-infected with:

	Yes	No	Unk		Yes	No	Unk		Yes	No	Unk
Chlamydia	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	Hepatitis B (sexually acquired)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	Genital Herpes	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
LGV	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	Hepatitis C (sexually acquired)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	Genital warts	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Syphilis	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	Mycoplasma genitalium	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>				

Treatment provided for this incidence of infection (please tick all relevant):

- Azithromycin
- Ceftriaxone
- Cefixime
- Penicillin
- Ciprofloxacin
- Spectinomycin
- Gentamicin
- Doxycycline
- Other, please specify

Euro-GASP isolate enhanced surveillance form

The European Gonococcal Antimicrobial Surveillance Programme (Euro-GASP) is a sentinel surveillance programme established by the ECDC to monitor trends in gonorrhoea antimicrobial resistance throughout the EU/EAA. Ireland participates in Euro-GASP via decentralised testing, i.e. Irish isolates are subjected to antimicrobial susceptibility testing within Ireland and the data is submitted to the ECDC via TESSy. Isolate collection begins annually in August and continues until at least 100 isolates, or approximately 10% of the total number of national annual gonorrhoea notifications, have been collected and tested for susceptibility to clinically relevant antimicrobial drugs. Enhanced surveillance information must also be collected to link susceptibility data with epidemiological data in order to allow targeted interventions and to inform public health policy, nationally and internationally.

The Clinical Microbiology Laboratory in St. James's Hospital has been designated the Interim Gonococcal Reference Laboratory for 2017. Isolates from any hospital laboratory in Ireland may be submitted to the Reference Laboratory for confirmation or characterisation and, to reflect the distribution of gonorrhoea cases nationally, these isolates may be included in the Euro-GASP submission.

To assist with the collection of enhanced surveillance data on Euro-GASP isolates the HPSC will contact local public health departments, if an isolate from that area is selected for Euro-GASP, using the clinic ID number to link the isolate and patient. We request that the local public health department distribute the enclosed enhanced surveillance form to the source clinician and that the completed form is returned to aoife.colgan@hpsc.ie. Alternatively, if preferred, the HPSC can directly distribute the form to the source clinician.

No personally identifiable information is requested on this enhanced surveillance form and all data will be used and stored confidentially.
