Gonorrhoea

(*Neisseria gonorrhoeae*)

Clinical criteria

Any person with at least one of the following eight:

- Urethritis
- Acute salpingitis
- Pelvic inflammatory disease
- Cervicitis
- Epididymitis
- Proctitis
- Pharyngitis
- Arthritis

OR

Any newborn child with conjunctivitis

Laboratory criteria

At least one of the following four:

- Isolation of *Neisseria gonorrhoeae* from a clinical specimen
- Detection of *Neisseria gonorrhoeae* nucleic acid in a clinical specimen
- Demonstration of *Neisseria gonorrhoeae* by a non amplified nucleic acid probe test in a clinical specimen
- Microscopic detection of intracellular gram negative diplococci in an urethral male specimen

Epidemiological criteria

An epidemiological link by human to human transmission (sexual contact or vertical transmission)

Case classification

A. Possible case

NA

B. Probable case

Any person meeting the clinical criteria and with an epidemiological link

C. Confirmed case

Any person meeting the laboratory criteria

Guidelines for completing the gonorrhoea surveillance form

Section A: Patient Information

Sex (at birth): Refers to a person's assigned sex at birth.

Gender identity: Refers to a person's internal sense of themselves (how they feel inside) as being male, female, transgender or otherwise. This may be different or the same as a person's assigned sex at birth. Further information and resources can be found at the website of Transgender Equality Network Ireland (www.teni.ie).

Ethnic group: This should be self-reported and is that to which the individual case identifies him or herself. It should not be "given" by investigator. Categories used as per Census 2016 with the addition of Roma. Further information and resources on collecting ethnic information can be found at www.hse.ie/eng/about/who/primarycare/
