

Immunisation Uptake Statistics for Ireland Quarter 1, 2001

**A report by the
National Disease Surveillance Centre**

Dr. Margaret Fitzgerald & Dr. Darina O'Flanagan

September 2001¹

¹ Updated October 2001, see revision Table 1, Page 3.

Introduction

The immunisation uptake statistics for children 12 months and 24 months of age in Quarter 1, 2001 who have received three doses of vaccines against diphtheria (D_3), pertussis (P_3), tetanus (T_3), *Haemophilus influenzae* type b (Hib_3), polio ($Polio_3$) and one dose of vaccine against measles, mumps and rubella (MMR_1 , uptake at 24 months only) are presented in this report. These statistics relate to uptake in the cohorts born between 01/01/2000 & 31/03/2000 and 01/01/1999 & 31/03/1999.

NDSC would like to thank the health boards for providing this data and special thanks to the Specialists in Public Health Medicine and the System Analysts for their assistance.

Results

Immunisation uptake at 12 months in Quarter 1, 2001

Immunisation uptake rates in children 12 months of age in Quarter 1, 2001 are presented (Table 1). National uptake of D_3 , T_3 , Hib_3 and $Polio_3$ at 12 months was 73% (based on data from seven health boards), while P_3 uptake was 74% (based on data from six health boards). The highest uptake rates at 12 months were reported by SEHB, 84 - 87% (Table 1).

Immunisation uptake at 24 months in Quarter 1, 2001

Immunisation uptake rates in children 24 months of age in Quarter 1, 2001 are presented (Table 1). National uptake rates ranged from 86% for D_3 and T_3 , 85% for Hib_3 and $Polio_3$, 82% for P_3 and down to 80% for MMR_1 . The target 95% rate was not reached at either national or health board level.

D_3 , T_3 , Hib_3 and $Polio_3$ uptake rates ranged from 94% in NEHB down to 81-82% in ERHA, MHB and MWHB. P_3 uptake ranged from 87% in SEHB to 77% in MHB (Table 1). MMR_1 uptake ranged from 90% in SEHB down to 75% in NWHB (Table 1).

Quarterly Trends

Data on immunisation uptake at 12 months is only available since Quarter 3, 2000. In Quarter 1, 2001 immunisation uptake rates at 12 months for D_3 , T_3 , Hib_3 and $Polio_3$ in Ireland (based on data from seven health boards) dropped by 2% to 74% compared to Quarter 4, 2000 (76%) and by 3% compared to Quarter 3, 2000 (77%). P_3 uptake at 12 months in Ireland (based on data from 6 health boards) dropped from 76% in Quarter 3, 2000, to 74% in Q4, 2000 and down to 73% in Q1, 2001 (Figure 1 and Table 2).

Overall, immunisation uptake rates at 24 months in Ireland dropped in Quarter 1, 2001 by 1% for D_3 , P_3 , T_3 and Hib_3 compared with the previous quarter, while $Polio_3$ uptake rates dropped by 2% (Figure 2 and Table 3). The most dramatic reduction in Quarter 1, 2001 was seen with MMR_1 uptake, it dropped by 4% to 79% from 83% in Q4, 2000 (Figure 2 and Table 3). Compared with Quarter 4, 2000, there was a drop in MMR_1 uptake in all health boards in Q1, 2001, with a 5% decrease seen in MWHB and NEHB (Figure 3).

The quarterly immunisation uptake rates at 24 months by health board are presented in Appendix 1a and 1b.

* Unable to provide uptake data at 12 months

** P₃ uptake could not be accurately calculated as DTaP/DT uptake was reported as a combined value

² This figure should be 79% and not 80% as stated in original report circulated in September 2001.

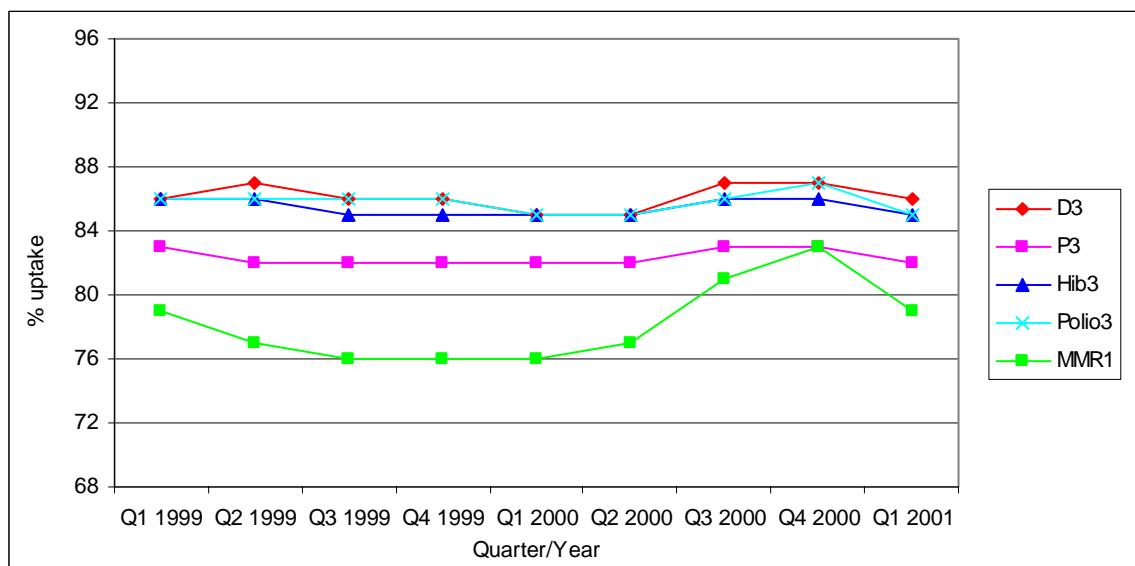

Figure 2. Quarterly immunisation uptake rates at 24 months in Ireland

Table 2. Quarterly national immunisation uptake rates (%) at 12 months

	D₃	P₃	T₃	Hib₃	Polio₃
Q3 2000	77	76	77	77	77
Q4 2000	76	74	76	76	76
Q1 2001	74	73	74	74	74

Note: NEHB unable to provide data.

NWHB provided DTaP/DT uptake as combined value. Therefore, since not possible to accurately determine P₃ uptake in NWHB, it was excluded from P₃ analysis

Table 3. Quarterly national immunisation uptake rates (%) at 24 months

	D₃	P₃	T₃	Hib₃	Polio₃	MMR₁
