IMMUNISATION UPTAKE STATISTICS FOR IRELAND

A REPORT BY THE NATIONAL DISEASE SURVEILLANCE CENTRE

Quarter 1-2002

August, 2002

Summary

Uptake rates for vaccines at 12 months have increased by 2-3% when compared with the previous quarter. In Quarter 1-2002 uptake for D₃, T₃ and Hib₃ was 72%, 71% for P₃ and Polio₃ and 70% for MenC₃.

At 24 months uptake rates for D_3 , T_3 , Hib and Polio $_3$ remained unchanged in Quarter 1-2002 compared with the previous quarter, while P_3 , and MMR $_1$ uptake increased by 1% to 80% and 70%, respectively.

Introduction

The immunisation uptake statistics for children 12 and 24 months of age in Quarter 1-2002 and who have received three doses of vaccines against diphtheria (D₃), pertussis (P₃), tetanus (T₃), *Haemophilus influenzae* type b (Hib₃), polio (Polio₃), Meningococcal group C (MenC₃, uptake at 12 months only) and one dose of vaccine against measles, mumps and rubella (MMR₁, uptake at 24 months only) are presented in this report. These statistics relate to uptake in the cohorts born between 01/01/2001 & 31/03/2001 and 01/01/2000 & 31/03/2000.

Results

Immunisation uptake at 12 months in Quarter 1-2002

Immunisation uptake rates in children 12 months of age in Quarter 1-2002 are presented (Table 1). National uptake of D_3 , T_3 and Hib $_3$ at 12 months was 72% and 71% for P_3 and Polio $_3$. Hib $_3$ uptake is based on data from seven of the eight health boards, as WHB was not in a position to provide uptake data on this vaccine for this quarter. The highest uptake rates at 12 months were reported by the NEHB at 82-84%, while the lowest rates were in the ERHA at 61-63% (Table 1).

National uptake at 12 months continued to improve in Quarter 1-2002 rising by 2-3% compared with the previous quarter (Figure 1). Apart from MHB and WHB, uptake at 12 months increased in all health boards in this quarter when compared with the previous quarter; ERHA (3-4%), MWHB (7-8%), NEHB (4-6%), NWHB (1-3%), SEHB (1%) and SHB (1-2%), see Appendix 1. However, rates declined in MHB (8-9%) and WHB (2-3%), see Appendix 1.

This is the first quarter that $MenC_3$ uptake data at 12 months has been collated nationally and was 68%. This ranged from 58% in MHB to 79% in SEHB (Table 1).

Vaccination coverage statistics for children 12 months of age in Quarter 1-2002 was 95% in Northern Ireland ¹ and 91% for the United Kingdom as a whole.²

Immunisation uptake at 24 months in Quarter 1- 2002

Immunisation uptake rates in children 24 months of age in Quarter 1-2002 are presented (Table 2). National uptake rates were 83% for D_3 , T_3 and $Polio_3$, 82% for Hib_3 and 81% for P_3 . Uptake for these vaccines ranged from 75-78% in ERHA and MHB up to 90-91% in NEHB (Table 2). MMR_1 uptake was 70%, ranging from 60% in ERHA to 82% in SEHB (Table 2). The target 95% rate at 24 months was not reached at either national or health board level for any of the vaccines.

Table 2. Immunisation uptake rates in children 24 months of age in Quarter 1- 2002

	% Uptake at 24 months Cohort born 01/01/2000 – 31/03/2000								
Health Board	No. in cohort	\mathbf{D}_3	P ₃	T ₃	Hib ₃	Polio ₃	MMR_1

SEHB	1,562	89	86	89	88	88	82		
SHB	1,961	85	82	85	84	84	75		
WHB	1,209	84	81	84	83	83	68		
Ireland	14,156	83	81	83	82	83	70		

In Q1-2002, D_3 , T_3 , Hib_3 and $Polio_3$ uptake rates at 24 months were unchanged from the previous quarter, while P_3 and MMR_1 uptake both increased by 1% (Figure 2 and Table 3). Although a very slight recovery in MMR_1 uptake was observed in this quarter, it is still 13% below the rates reported in Q4-2000 and 25% below the national target rate.

Data on MenC uptake in children 24 months of age in Q1-2002 are not presented in this report as difficulties were experienced in extracting data on those that had actually completed the MenC schedule. This was related to the fact that depending on the age children from this birth cohort presented for vaccination, the number of doses required to complete the MenC schedule varied between one and three doses.

In Quarter 1-2002 vaccination coverage statistics at 24 months for D_3 , P_3 , T_3 , Hib_3 , $Polio_3$ and $MenC_3$ was 96-97% in Northern Ireland 1 and 92-94% for the United Kingdom as a whole. 2 MMR $_1$ uptake was 90% in Northern Ireland 1 and 84% in the UK. 2

Q4 2001	83	80	83	82	83	69
Q1 2002	83	81	83	82	83	70

Note: Prior to Q1-2002, NWHB provided DTaP/DT uptake as combined value, since not possible to accurately determine P₃ uptake for this health board, it was excluded from overall P₃ analysis

MMR₁ uptake by Health Board

Overall in Q1-2002, MMR₁ uptake at 24 months increased by 1% to 70%. When compared with the previous quarter MMR₁ uptake rates increased in MWHB (6%), NWHB (6%) and SHB (1%), declined in MHB (6%) and NEHB (2%) and remained largely unchanged in ERHA, SEHB and WHB (Figure 3).

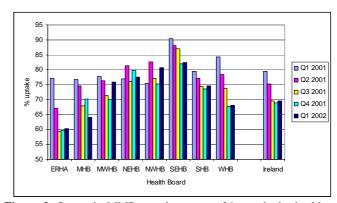

Figure 3. Quarterly MMR₁ uptake rates at 24 months by health board in 2001 (Note scale ranges from 50-95%)

Detailed quarterly immunisation uptake statistics at 12 and 24 months for each health board are presented in Appendix 1 & 2 of this report.

Detailed national MenC uptake statistics as a result of the campaign are currently being collated and will be presented in a separate report shortly
