IMMUNISATION UPTAKE STATISTICS FOR IRELAND

A REPORT BY THE NATIONAL DISEASE SURVEILLANCE CENTRE

Quarter 3-2002

February, 2003

Summary

In Quarter 3-2002, national uptake rates for vaccines at 12 months increased by 5% in all cases when compared with the previous quarter with the exception of MenC₃ uptake which increased by 3% to 76%. Uptake rates for D₃, T₃, Hib₃ and Polio₃ were 77% and was 76% for P₃.

At 24 months, uptake rates for all vaccines remained unchanged in Quarter 3-2002 when compared with the previous quarter with the single exception of MMR₁. National uptake of MMR₁ increased by 1% to 73% in Quarter 3-2002. Uptake for both Hib₃ and Polio₃ were 82% while uptake rates for both D_3 and D_3 were 83%. The national uptake rate for D_3 was 81%.

Introduction

The immunisation uptake statistics for children 12 and 24 months of age in Quarter 3-2002 and who have received three doses of vaccines against diphtheria (D₃), pertussis (P₃), tetanus (T₃), *Haemophilus influenzae* type b (Hib₃), polio (Polio₃), Meningococcal group C (MenC₃; uptake at 12 months only) and one dose of vaccine against measles, mumps and rubella (MMR₁; uptake at 24 months only) are presented in this report. These statistics relate to uptake in the cohorts born between 01/07/2001 & 30/09/2001 and 01/07/2000 & 30/09/2000.

Results

Immunisation uptake at 12 months in Quarter 3-2002

Immunisation uptake rates in children 12 months of age in Quarter 3-2002 are presented (Table 1). National uptake rates for D_3 , T_3 , Hib_3 , and $Polio_3$ at 12 months were 77% and were 76% for P_3 and $MenC_3$. The highest uptake rates at 12 months were reported by the NWHB at 84-87%, while the lowest rates were reported in the ERHA at 69-71% (Table 1).

National uptake of all vaccines at 12 months of age increased by 3-5% when compared with the previous quarter. Six of the 8 health boards reported increases in uptake rates for all vaccines; ERHA (1-8%), MHB (5-12%), MWHB (5-6%), NEHB (3-5%), SEHB (3-4%), and SHB (3-5%) [Appendix 1]. In the NWHB, uptake rates for all vaccines were up by 3-8% with the single exception of P₃ which remained unchanged

when compared with Q2-2002. Uptake rates for all vaccines at 12 months decreased by 1% in the WHB.

In addition, the MHB reported the greatest increases in uptake rates for $D_3(10\%)$, $P_3(11\%)$, $T_3(10\%)$, $Hib_3(10\%)$ and $Polio_3(12\%)$ at 12 months while the biggest increase in uptake of $MenC_3$ was reported in the NWHB (8%).

Vaccination coverage statistics for children 12 months of age in Quarter 3-2002 were 94-95% in Northern Ireland¹ and 90-91% for the United Kingdom as a whole².

Table 1. Immunisation uptake rates in children 12 months of age in Quarter 3-2002

	% Uptake at 12 months Cohort born 01/07/2001 – 30/09/2001

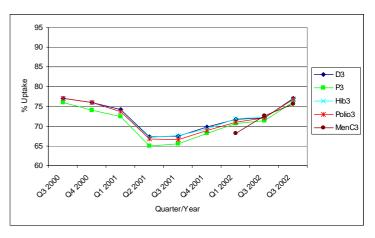

Figure 1. Quarterly immunisation uptake rates at 12 months in Ireland (Note: scale ranges from 60-95% uptake)

Immunisation uptake at 24 months in Quarter 3- 2002

Immunisation uptake rates in children 24 months of age in Quarter 3-2002 are presented (Table 2). National uptake rates were 82% for Hib $_3$ and Polio $_3$, 83% for D $_3$ and T $_3$ and 81% for P $_3$. Uptake rates for these vaccines ranged from 76-78% in the ERHA up to 88-93% in the NWHB (Table 2). MMR $_1$ uptake was 73% nationally, ranging from 64% in the ERHA to 82% in the MWHB (Table 2). The target 95% rate at 24 months was not reached at either national or health board level for any of the vaccines.

Table 2. Immunisation uptake rates in children 24 months of age in Quarter 3- 2002

	% Uptake at 24 months Cohort born 01/07/2000 – 30/09/2000						
Health	No. in	\mathbf{D}_3	P ₃	T ₃	Hib ₃	Polio ₃	MMR_1
Board	cohort

SHB	2,027	84	82	84	83	83	76
WHB	1,254	82	81	82	82	81	74
Ireland	14,717	83	81	83	82	82	73

In Q3-2002, P_3 , D_3 , T_3 , Hib_3 and $Polio_3$ uptake rates at 24 months remained unchanged when compared with the previous quarter (Figure 2 and Table 3). Although a further slight recovery in the national MMR_1 uptake rate was observed in this quarter, it is still 10% below the uptake rate reported in Q4-2000 and 22% below the national target.

Data on MenC₃ uptake in children 24 months of age in Q3-2002 are not presented in this report due to difficulties experienced in extracting data on those that had actually completed the MenC schedule. This was related to the fact that depending on the age children from this birth cohort presented for vaccination, the number of doses required to complete the MenC schedule varied between one and three doses.

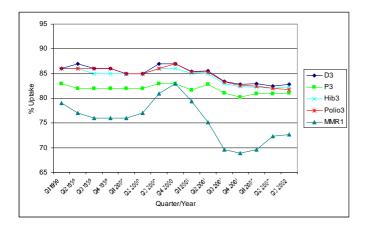

Figure 2. Quarterly immunisation uptake rates at 24 months in Ireland (Note: scale ranges from 65-95% uptake)

In Quarter 3-2002 vaccination coverage statistics at 24 months for D_3 , P_3 , T_3 , Hib_3 , $Polio_3$ and $MenC_3$ were 96-97% in Northern Ireland and 92-94% for the United Kingdom as a whole. MMR_1 uptake was 89% in Northern Ireland and 83% in the UK.

Q3 2002	83	81	83	82	82	73

Note: Prior to Q3-2002, NWHB provided DTaP/DT uptake as combined value, since not possible to accurately determine P₃ uptake for this health board, it was excluded from overall P₃ analysis

MMR₁ uptake by Health Board

In Q3-2002, national MMR₁ uptake rates at 24 months increased by 1% to 73% when compared with the previous quarter. MMR_1 uptake rates increased in ERHA (+1%), MHB (+2%), and SHB (+2%) while uptake rates remained unchanged in MWHB and SEHB. Uptake rates decreased slightly in NEHB (-2%) NWHB (-1%) and WHB (-4%) (Figure 3).

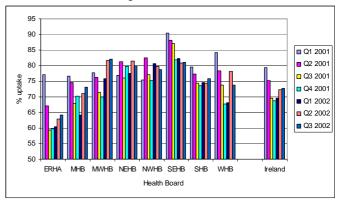

Figure 3. Quarterly MMR_1 uptake rates at 24 months by health board in 2001 and 2002 (Note: scale ranges from 50-95% uptake).

Detailed quarterly immunisation uptake statistics at 12 and 24 months for each health board are presented in Appendix 1 & 2 of this report.
