

## Infectious Disease Notifications in Ireland, 2020 - 2024

Figures are provisional for: 2024

**Figures may differ from those previously published, due to ongoing updating of notification data on the Computerised Infectious Disease Reporting (CIDR) system. These figures were extracted from the CIDR System on: 29/04/2025**

Figures for the EARS-Net pathogens (Escherichia coli, Enterococci, Klebsiella pneumoniae, Pseudomonas aeruginosa and Staphylococcus aureus) and certain sexually transmitted infections (specifically, ano-genital warts and non-specific urethritis) are not provided here, as these diseases were not notified via the CIDR system during the above period.

NA: Indicates that data for the diseases and years indicated above are not available in CIDR.

^ Since 17/03/2013 events of Chlamydia trachomatis infection (genital), Noroviral infection, Respiratory syncytial virus (RSV) infection & Rotavirus infection created by the former HSE East region were 'fast-tracked' & refer to notifications rather than patients; this practice ceased for RSV notifications on 21/06/2022 and for Chlamydia, Norovirus and Rotavirus notifications on 01/01/2023. Since week 1 2025 (Jan 6th 2025) data on Chlamydia trachomatis infection, Noroviral infection and Campylobacter infections are only reported at national level. It is not possible to report data on these infections by individual health region. This change is due to the implementation of a 'fast-tracked' method for processing these diseases.

‡ COVID-19 became notifiable on 20/02/2020.

§ HIV notifications in this report represent the first time each (an) individual has a positive HIV test in Ireland. This will include people who have their first positive HIV test ever, and those who are living with HIV, having previously had a positive HIV test outside of Ireland. The HPSC annual HIV report provides further information where these data are separated further <https://www.hpsc.ie/a-z/hivandaids/hivdataandreports>

\*‡ mpox became notifiable on 27/05/2022.

\* Since 1st January 2024, the case definition for trichomoniasis has been updated to include the detection of T. vaginalis nucleic acid target in specimens from clinically appropriate sites using a validated method. This has resulted in increased reporting and direct comparison with data from earlier years is not valid.

For more information on notifiable infectious diseases, please see HPSC case definitions for notifiable diseases, available at [www.hpsc.ie](http://www.hpsc.ie)
